PROFESSIONAL SUMMARY

Integration Engineer and Consultant with hands-on experience designing, developing, and deploying end-to-end integration solutions using MuleSoft Anypoint Platform. Proven expertise in managing complete integration lifecycle—from problem definition, effort estimation, requirements analysis, and technical design to solution generation, testing, deployment, and performance monitoring. Successfully delivered API-led integrations for ServiceNow, Salesforce, and messaging systems with 99.9% reliability. Experienced in exploring solution alternatives through research, literature surveys, and vendor evaluation, building POCs to validate technical approaches. Strong collaborator working with clients, developers, QA teams, and product managers in Agile environments. Skilled in identifying business challenges, creating requirement specifications, defining to-be processes, and assessing current processes to identify improvement areas and suggest technology solutions. Proficient in root-cause analysis, troubleshooting integration issues, and staying current with industry trends and emerging technologies. Eager to take on customer-facing consulting responsibilities and travel onsite as needed.

TECHNICAL SKILLS

Integration & Platforms:

MuleSoft Anypoint Platform (Studio, API Manager, Runtime Manager, CloudHub), API-led Connectivity, Anypoint MQ, Flex Gateway, System Integration Design & Implementation

Consulting & Analysis:

Problem Definition, Effort Estimation, Solution Generation, Requirements Analysis, Process Assessment & Improvement, To-Be Process Definition, POC Development, Solution Alternatives Exploration, Vendor Evaluation, Root-Cause Analysis, Business Challenge Identification

Programming & Technologies:

REST/SOAP APIs, Core Java, Spring Boot, JavaScript, TypeScript, Python, SQL, Databases: PostgreSQL, MongoDB, Redis, Testing: MUnit, JUnit, Postman, Manual & Automation Testing, Tools: Docker, CI/CD Pipelines, Git, MS Excel

Methodologies & Domain:

Agile/Scrum, SDLC/STLC, Cross-functional Collaboration, Client Engagement, IT Services & Integration Domain, Enterprise Application Integration

EDUCATION

M.Sc. Software Systems

Kongu Engineering College, Erode

2018–2023 | CGPA: 7.5

HSC

Kongu National Matriculation School, Erode

2018 | 71.5%

CERTIFICATIONS

MuleSoft Certified Developer – Level 1

Certified System Administrator

WORK EXPERIENCE

Analyst Developer
Feb 2024 – Jul 2026

FirstQA Systems

Manage end-to-end integration solutions using MuleSoft Anypoint Platform, covering complete integration lifecycle from problem definition, effort estimation, requirements analysis, and solution generation to deployment and monitoring in Agile environment.

Key Responsibilities:

- Work with clients to identify business challenges, analyze requirements, and contribute to client deliverables by refining and structuring data to define solution requirements.
- Design and implement integration solutions for ServiceNow and Salesforce, managing entire process from inception to deployment including effort estimation and solution generation.
- Explore solution alternatives through research and vendor evaluation, build POCs to validate technical approaches and recommend optimal solutions.
- Create requirement specifications from business needs, define to-be processes, and develop detailed functional designs and technical documentation with architecture diagrams.
- Assess current processes, identify improvement areas, and suggest technology solutions to optimize integration workflows and system efficiency.
- Configure solution requirements on MuleSoft products, diagnose root-cause of issues, and identify and shortlist solution alternatives.
- Create comprehensive test plans, execute testing protocols, troubleshoot integration issues, and monitor system performance to ensure reliability.
- Collaborate with developers, QA teams, and product managers ensuring successful integration delivery across stakeholders.

KEY PROJECTS

ServiceNow Integration using MuleSoft

Managed incident-management and CMDB integrations end-to-end, building POCs to validate solution alternatives, capturing requirements, and defining to-be workflows. Automated CRUD processes with error handling, executed lean test cycles, and implemented monitoring to catch root-cause issues early.

Impact: *Reduced incident resolution time by 40%, decreased manual effort through automation, and improved operational efficiency.*

Salesforce Integration using MuleSoft

Partnered with business teams to design real-time Salesforce sync, evaluated solution options via POCs, and recommended the target architecture. Authored lightweight requirement specs, defined to-be flows, implemented OAuth 2.0 APIs, and tuned performance through focused RCA.

Impact: *Achieved 99.5% data synchronization accuracy, eliminated manual data entry errors, and enabled real-time decision-making.*

Anypoint MQ Messaging System

Built asynchronous messaging workflows with retry and DLQ patterns, documenting deployment steps and alerts. Collaborated with platform teams on performance fixes and rolled out lightweight monitoring dashboards for proactive action.

Impact: *Enhanced system reliability to 99.9% uptime, supported scalable architecture handling 10,000+ messages/day.*

Multi-Agent SDLC & DevSecOps Platform

Enhanced a multi-agent SDLC platform by adding polyglot language adapters, DB abstractions, and secure CI/CD hooks. Integrated multiple LLM providers with routing rules to accelerate code generation while meeting guardrails.

Impact: *Accelerated SDLC through automation, improved code quality via AI validation, and strengthened security.*
