ABOUT ME

Self-driven AI & Data Science undergraduate with practical experience in AI, deep learning, computer vision, and full-stack development. Proficient in Python, TensorFlow, React, Node.js, Express, JavaScript, and Power BI. Passionate about solving real-world problems and contributing to innovative, collaborative projects.

EDUCATION

2022 - 2026
Knowledge Institute of Technology,
B.Tech AI&DS,
CGPA: 8.6 (86%)

2021 - 2022
Jay Matric Higher Secondary School,
HSC - 94%

2019 - 2020
Jay Matric Higher Secondary School,
SSLC - 96%

INTERNSHIP

Jul - Aug 2024
Dev Technologies

Java Full Stack Development
Developed a Student Database Management system to streamline student data access for both students and college staff. Through this Internship, i got the chance to enter into the web development side and how to connect database with frontend and how to use queries inside the program and learned other programming skills like HTML, CSS, and JS

Feb - March 2024
Unified Mentor

Data Science
Developed a financial analysis project using Python and created interactive Dashboards using PowerBI.

Mar - Apr 2024
Codsoft

Machine Learning
Developed three mini projects namely, SMS Spam Detection, Movie Genre Classiification, and Bank Churn Detection. These are all the mini projects I made during the internship and through this I got a clear vision about how to work with data, clear understanding of Machine Learning use cases and it lead me to explore new things on ML and DL domains.

PROJECTS

- **Bus Time Management**
  - Developed an automated bus tracking system using license plate recognition (95% accuracy) with Python, TensorFlow, and OpenCV, storing entry/exit logs in Excel.
- **AI-powered LCNC Platform**
  - Developed an AI-powered Low-Code/No-Code platform that enables rapid application creation with minimal coding effort. It integrates AI-assisted development tools for smart code generation, workflow automation, and predictive logic.
- **Bone Fracture Detection**
  - Built a Flask-based web app integrating YOLOv8 for bone image detection, enabling real-time uploads, predictions, and result visualization with automated image storage.

ACHIEVEMENTS

- 2nd Prize – Hackathon, PSNA College of Engineering and Technology

TECH SKILLS

- Programming: Python, Java, C
- Web design: Html, CSS, JavaScript
- Libraries: Scikit-learn, OpenCV
- Tools: PowerBI, Github, Roboflow, MS Excel
- Database: SQL
