SUMMARY

Computer Science and Engineering graduate with a solid foundation in software engineering and practical project experience. Strong problem-solving, analytical, and collaboration skills with a commitment to continuous learning. Aspiring Software Development Engineer focused on building impactful software solutions.

EDUCATION

Kongunadu College of Engineering and Technology, Trichy 2023 – 2027
Bachelor of Engineering (B.E.) in Computer Science and Engineering CGPA: 8.0

Raj Vidya Bhavan Matric Hr. Sec. School 2022 – 2023
Higher Secondary Certificate (HSC) 88.8%

TECHNICAL SKILLS

Programming Languages: Java, Python

Web Technologies: HTML5, CSS3, Javascript

Databases: MySQL, MongoDB

Tools: Git, GitHub, VS Code

Technical Exposure: ESP32, Arduino IDE, IoT, Sensor Integration

PROJECTS

AI Hydroponic Tomato Farming Simulator

- Built a Flask-based web application for predicting tomato growth percentage and crop yield.
- Trained Random Forest and Decision Tree regression models using Scikit-learn.
- Integrated MongoDB to store simulation history and prediction results.
- **Technologies: Flask, Python, MongoDB, Machine Learning**

Smart Fall Detection and Emergency Alert System

- Developed an IoT-based wearable fall detection system for elderly people to detect accidental falls in real time using motion sensors and ESP32.
- Implemented automatic emergency alert notifications to caregivers and family members, enabling faster response during critical situations.
- Integrated sensor data acquisition, threshold-based fall detection, and wireless communication to support continuous health and safety monitoring for senior citizens.
- **Technologies Used:** ESP32, MPU6050, IoT, Embedded C, Arduino IDE

AI-Powered User Activity Monitoring System *Role: Frontend Developer*

- Developed the frontend interface for a Windows security monitoring system to visualize Windows Event Viewer logs and security alerts.
- Collaborated with the backend to integrate Isolation Forest-based anomaly detection for real-time login behavior monitoring.
- Designed an intuitive dashboard for displaying suspicious user activities and security insights, improving the overall user experience.
- **Technologies:** HTML, CSS, JavaScript, Python, Scikit-learn, Pandas

PUBLICATION

- **An Intelligent System for Early Leak Prediction and Risk Localization in Urban Water Pipelines** – International Journal of Science, Engineering and Technology (IJSET), Volume 14, Issue 2, 2026.
- Co-authored a research paper on AI-based early leak prediction and risk localization using machine learning and sensor-based monitoring.

CERTIFICATIONS

- IBM SkillsBuild Data Fundamentals
- Infosys Springboard Principles of Generative AI
- MongoDB Basics for Students
- Python with Django
- Java Programming

ACHIEVEMENTS

- Received a **Certificate of Appreciation** for participating in the **Cognizant Technoverse Hackathon** .
- Participated in AI Hackathon conducted by SASTRA University.
- Participated in HACK $DAY Hackathon.
- Built multiple AI and Full Stack Development projects.

AREA OF INTEREST

- Software Development
- Full-Stack Development
- Artificial Intelligence
- Machine Learning
- Cloud Computing

LANGUAGES

- Tamil
- English
- Hindi
- Japanese N4 progress
