SUMMARY

Results-oriented graduate with a strong foundation in Python, Core Java, SQL, and object-oriented programming. Proficient in backend development, REST API fundamentals, and database management. Skilled in writing clean, maintainable code with strong problem-solving and analytical abilities. Quick to learn new technologies and adapt to dynamic development environments. Passionate about building scalable, secure, and high-quality software solutions. Looking for an entry level software development

SKILLS

Programming Languages : Python, Java

Web Technologies : HTML, CSS

Databases : MySQL

Tools : VS Code, MS Word

EDUCATION

Bachelor of Engineering – Computer Science and Engineering

2022 – 2026

Mahendra Engineering College

INTERNSHIP EXPERIENCE

Salesforce Developer Virtual Internship

Completed an 8-week Salesforce Developer Virtual Internship at SmartInternz, where I gained hands-on experience with Salesforce development and automation. Successfully completed the Developer Super Set, including the Apex Specialist and Process Automation Specialist Superbadges. Developed practical knowledge of Apex programming, SOQL, SOSL, Salesforce Flows, Approval Processes, and workflow automation through real-world challenges and Trailhead modules. This internship enhanced my problem-solving, technical, and Salesforce platform skills while providing practical exposure to industry-standard development practices.

PROJECTS

Virtual Try-On Shopping Platform

This project is an AI-based Online Virtual Shopping Platform that enables users to browse clothing products and virtually try them on before making a purchase. The application uses TensorFlow.js to provide a real-time virtual try-on experience through a webcam or uploaded image, helping users visualize how the clothes look. I developed the backend using Spring Boot with JWT authentication and BCrypt for secure user login and registration. The frontend was built using HTML, CSS, and JavaScript to create a responsive and user-friendly interface. The system also includes product browsing and user management features. This project enhanced my skills in full-stack web development, REST APIs, authentication, and integrating AI into web applications while improving the overall online shopping experience.

Controlling and Analysis of Battery Energy System in Electric Vehicle

Developed a machine learning-based battery analysis system to predict the health and performance of electric vehicle batteries using the Random Forest algorithm. The project involved data preprocessing, battery performance analysis, and prediction of battery degradation based on charging cycles, temperature, and usage patterns. Evaluated the model using MAE and RMSE metrics to improve prediction accuracy and support efficient battery management, helping enhance battery lifespan and overall EV performance. Technologies used: Python, Jupyter Notebook, Machine Learning, Random Forest, HTML, and CSS.

CERTIFICATIONS

- AI Foundation – Infosys Springboard
- Python Backend Development – Livewire
- Cloud Computing – NPTEL
