CAREER OBJECTIVE

Motivated Computer Science and Engineering fresher specializing in Cloud Computing and DevOps, with hands-on knowledge of AWS services including EC2, S3, IAM, VPC, CloudFront, RDS, and ELB. Familiar with Docker, Kubernetes, Jenkins, Git, CI/CD, and Terraform for application deployment and infrastructure automation. Seeking an entry-level Cloud/DevOps Engineer position to apply technical skills, build scalable cloud solutions, and contribute to automated and reliable infrastructure.

TECHNICAL SKILLS

Cloud Platform: AWS – EC2, S3, IAM, VPC, CloudFront, RDS, ELB / **DevOps Tools:** Docker, Kubernetes, Jenkins, Git, CI/CD, Anisible,Terraform

Programming & Scripting: Python, Bash / **Networking:** TCP/IP, DNS, HTTP/HTTPS, Subnetting / **Operating Systems:** Linux, Windows

Version Control: Git, GitHub

INTERSHIP & TRAINING EXPERIENCE

AWS DevOps Intern & Training ACTE Technologies, Chennai (2026)

- Completed 3-month AWS DevOps internship and training program in cloud infrastructure and CI/CD.
- Managed core AWS services including EC2, S3, VPC, IAM, and RDS in lab environments.
- Built CI/CD pipelines using Jenkins, GitHub Actions, and Docker for automated build and deployment

Cybersecurity Intern – Pargavan Cyber Solution

- Completed a technical internship focused on penetration testing and cybersecurity practices, gaining hands-on experience in identifying security vulnerabilities.
- Performed security testing using tools such as Nmap, Metasploit, and Burp Suite to assess systems and web applications for potential vulnerabilities.

PROJECTS

1. Automated CI/CD Pipeline using Jenkins, Docker & AWS EC2

- Developed an automated CI/CD pipeline using Jenkins to build, test, and deploy applications.
- Containerized the application using Docker for consistent deployment across environments.
- Deployed Docker containers on AWS EC2 instances.
- Integrated GitHub with Jenkins to automatically trigger builds and deployments when code changes were pushed.
- Applied DevOps practices to reduce manual deployment effort and improve delivery efficiency.

2. Kubernetes-Based Cloud Application Deployment

- Containerized applications using Docker and deployed them using Kubernetes.
- Created and managed Kubernetes Deployments, Services, ConfigMaps, and replicas.
- Implemented scalable application deployment using Kubernetes orchestration.
- Integrated Jenkins CI/CD for automated application deployment.
- Used Terraform concepts for automated cloud infrastructure provisioning and management.

3.Byzantine -Resistant Federated Learning Using Reinforced RNN final-year project

- Developed a privacy-preserving Federated Learning system to detect malicious/Byzantine client updates.
- Implemented Reinforced RNN and trust-based filtering to improve model robustness.
- Achieved approximately 92% accuracy, compared to 87% in the existing method.
- Technologies: Python, RNN, Federated Learning, Machine Learning, Streamlit.

CERTIFICATIONS

AWS Skill Builder – Amazon EC2 Basics,AWS Cloud Practitioner Essentials , AWS Computing Solutions , AWS Technical Essentials , AWS Cloud Essentials , Introduction to Amazon S3 , Introduction to Amazon VPC , Introduction to AWS Identity and Access Management (IAM) , Official Practice Question Set – AWS Certified Cloud Practitioner (CLF-C02)

EDUCATION

Bachelor of Engineering – Computer Science & Engineering (Cyber Security)
K S R Institute for Engineering and Technology, Tiruchengode | 2022 – 2026 | CGPA: 7.25 / 10

LEADERSHIP

Treasurer – Spring fest 2K25 National Symposium
