PROFILE SUMMARY

Engineering graduate with good technical, analytical, and communication skills, passionate about building a successful career in a growth-oriented organization where I can learn, contribute, and grow professionally. Seeking an opportunity to contribute technical expertise, enhance organizational growth, and build a successful professional career.

CORE SKILLS

EV Powertrain: Electric vehicle architecture

Data analysis: Excel, Power bi, dashboardings

Manufacturing: Quality inspection

PROJECT

Experimentation study of sound and vibration absorption in two-wheeler engine, *Mar-2024*

- Conducted experimental research on sound and vibration damping in two-wheeler engines using eco-friendly **tea waste** and **nano-clay** composites.
- The composite mould was designed to accomodate the blend of tea waste and nano-clay in uniform matrix.
- The mould design ensured easy demoulding and minimal material wastage The developed composite was subjected to multiple tests are **vibration testing**, **water absorption testing**, **sound absorption testing** and **SEM**.
- The composite showed promising results in mid frequency sound absorption and effective vibration damping. Design and fabrication of automatic cleaning.

Design and fabrication of automatic cleaning & **mopping robot**, *Mar-2023*

- Built an autonomous cleaning and mopping robot using **arduino uno**, **ultrasonic sensors**, and **IR modules** for smart obstacle detection and surface mapping.
- The robot's design, components and software are integrated to create a functional prototype. Navigation and cleaning algorithms are coded for autonomous operation.
- The robot is tested for functionality, durability and performance. The tested results to ensure the robot correctly detects the walls and obstacles.

Employee performance visualization & **insights dashboard** | *Microsoft Excel* *Jun-2026*

- Developed an interactive employee **performance** & **insights** dashboard using advanced Excel features to analyse workforce performance.
- Utilized **pivot tables**, **pivot charts**, **slicers** and **timelines** to create dynamic reports and visualizations.
- Data summarization and reporting processes, improving efficiency and reducing manual analysis efforts.

Employee performance & **finance dashboard** | *Power BI* *Aug-2026*

- Developed an interactive Power BI dashboard to analyze sales performance.
- Cleaned and transformed sales data using **power query**.
- Designed interactive dashboards with **KPIs**, **charts**, **slicers** and **filters**.

ACITVITIES

- Design & fabrication of glider workshop conducted by aero modelling club in association with jet aerospace aviation research centre (**UAV Research division**).
- Participated in **mechanical CAD** as a part of e-horyzon'23 organized by **IIC** and **EMDC**.
- Participated in **international conference** conducted by dept of automobile engineering at kongu engineering college.

EDUCATION

Kongu engineering college, **Perundurai**

BE - Automobile Engineering CGPA: 7.54

COURSES & Certification

NPTEL Noise management & **control** - This course is intended for all those who want to understand noise, its control, and its management. course is to engineering and science, industry and research organizations.

Software testing - Ensures software quality learn how to detect bugs early, improve performance, automation testing and ensure software meets user expectations.

Excel & **Power Bi** - course with hands-on training in data analysis, pivot tables, charts, formulas, and dashboard creation. skilled in organizing, analysing, and presenting data to support business decision-making.
