Projects

- **Project Title: Extraction of Natural Dyes: Preparation and Analysis"**
  Extraction of natural dyes is the process of obtaining color pigments from natural sources such as plants, flowers, fruits, leaves, bark, and roots. These dyes are prepared using simple methods like boiling, soaking, or solvent extraction. The extracted dye is then analyzed to study its color strength, stability, and suitability for applications like textile dyeing, food coloring, and cosmetics. Natural dyes are eco-friendly, safe, and biodegradable.

  Key Features:

  Natural Sources - Dyes are obtained from plants, flowers, fruits, and minerals.

  Eco-Friendly-Non-toxic and safe for the environment.

  Simple Extraction Methods - Includes boiling, soaking, fermentation, or solvent extraction.
