RESUME

Name : KANNAN M
Email id : kannanvuv5c@gmail.com
Mobile No: 8870255870
Linkedin: https://www.linkedin.com/in/kannan-m-a56138391

Career Objective

I would like to be in an environment where I can work with the best talents in the areas of Security Analysis in Network Scanning and Vulnerability Assessment, where every assignment would be a challenging and rewarding experience.

Professional Summary

- Relevant experience: 3+ Years of Experience in the area of **Cyber Security Analyst**
- 2+ years of experience with penetration testing tools, including **Nessus, Nmap, Brupsuite, Owasp-Zap and SQLMap**
- 1+ years of experience in Vulnerability Assessment
- Scanning and discovering rouge hosts, networks, and devices and scanning and discovering vulnerable systems and applications
- Analyzing security breaches to identify the root cause
- Ability to coordinate, work with and gain the trust of business stakeholders to achieve a desired objective
- Strong attention to detail in conducting analysis combined with an ability to accurately record full documentation in support of their work
- Good interpersonal skills, commitment, result oriented, hard working with a quest and Zeal to learn new technologies and undertake challenging tasks.

Technical Skills & Certification

Automation Tools	:	Tanium, Nmap, Nessus, OWASP-ZAP, Brupsuite, SQLMap
Programming Language	:	Python
Database	:	Microsoft SQL Server
Operating System	:	MS-Windows and Linux
Certification	:	Certified Ethical Hacker (CN: ECC4675812309)

Educational Study

MBA (Master of Business Administration) from **Tamilnadu College of Engineering** under the Affiliation of **Anna University (2014)**
BCA (Bachelor of Computer Application) from **Sri Balamurugan Arts& Science College** under the Affiliation of **Periyar University (2012)**

Present Professional Experience

Company : Treball Netzwork Technologies Pvt Ltd, Chennai

Period : July 2023 – February 2026

Designation : Cyber Security Analyst

Present Project Details (Nov 2024 – Feb 2026)

Project : Hos-Medic Premises App
Domain : ERP
Role : Web Pentesting
Security Tools : Nmap, Nessus, Brupsuite, SQLMap
Team size : 6

Responsibilities:

- Conducted vulnerability assessment of Web Applications and provide support for network security solutions
- Responsible for conducting vulnerability assessment scans, assisting with exposing security vulnerabilities risks and recommending solutions to mitigate such vulnerabilities
- Skilled using Brupsuite, NMAP, Nessus, SQLMap, Owasp-Zap, Dirbuster, Nikto, Netcat, Sublist3r, Subscraper
- Good in understanding application level vulnerabilities like XSS, SQL Injection, XML,XXE, CSRF,SSRF, authentication bypass, File Inclusion (LFI & RFI), File upload (RCE & Blind Shell using PHP) IDOR, OS Injection, HTTP & HTTPS (SSL, TLS) attacks, session hijacking, MITM
- Identifying the Critical, High, Medium, Low vulnerabilities in the applications based on OWASP Top 10 and SANS 25 and prioritizing them based on the criticality
- Experience in understanding of SDLC and OSI model in network security
- Acquainted with various approaches to Grey and Black box security testing
- Experience with analyzing the development of technical documentation, including test plans, executive briefs, vulnerability assessment and penetration test reports
- Performed with manual Web Pentesting used XSS and SQL Injection attacks in websites and sub-domain links and IP
- Used Python script to automate network scanning to identify open ports and services running
- Execute daily vulnerability assessments, threat assessment, mitigation and reporting activities to safeguard information assets and ensure protection has been put in place on the systems.
- Provides assistance to system users relative to information systems security matters
- Involving in Firewall protection using IPtables in IDS(Nessus, Log server), IPS(AV server, Port Filtering)
- Involving in network issue troubleshooting and AV server update on weekly basis
- Be responsible for performing manual and automate penetration testing to communicating with findings to reporting Senior Developers to mitigate the security risk
- Follow up and ensure the closure of the raised vulnerabilities by revalidating and ensuring 100% Closure

Project Details (July 2023 – Oct 2024)

Project : CashPRO App
Domain : Banking
Role : Web Pentesting and Vulnerability Assessment
Security Tools : Nmap, Nessus, Brupsuite, SQLMap
Team size : 6

Responsibilities:

- Manage vulnerability remediation and provide oversite for vulnerability mitigation and security activities

- Conducted vulnerability assessment of Web Applications and provide support for network security solutions
- Manage vulnerability detection, assessment, and analysis
- Develop plans with executive management, business units and technical resources to enhance the current vulnerability management program
- Responsible for conducting vulnerability assessment scans, assisting with exposing security vulnerabilities risks and recommending solutions to mitigate such vulnerabilities
- Direct and manage team of vulnerability management and incident response resources
- Direct and manage roll-out of static and dynamic code analysis
- Orchestrate the analysis and delivery of vulnerability findings to internal customers with impactful, comparative, interpretative security analysis in a clear, consistent, and factual manner
- Responsible for tracking and reporting metrics, including detection and use of various available inventories and scan results, data modelling, processing, calculating and transformation into meaningful metrics and reports
- Analyze data or information, identifying the underlying principles, reasons or fact of information by breaking down information or data into separate parts
- Skilled using Brupsuite, NMAP, Nessus, SQLMap, Owasp-Zap, Dirbuster, Nikto, Netcat, Sublist3r, Subscraper
- Good in understanding application level vulnerabilities like XSS, SQL Injection, XML,XXE, CSRF,SSRF, authentication bypass, File Inclusion (LFI & RFI), File upload (RCE & Blind Shell using PHP) IDOR, OS Injection, HTTP & HTTPS (SSL, TLS) attacks, session hijacking, MITM
- Identifying the Critical, High, Medium, Low vulnerabilities in the applications based on OWASP Top 10 and SANS 25 and prioritizing them based on the criticality
- Experience in understanding of SDLC and OSI model in network security
- Acquainted with various approaches to Grey and Black box security testing
- Experience with analyzing the development of technical documentation, including test plans, executive briefs, vulnerability assessment and penetration test reports
- Performed with manual Web Pentesting used XSS and SQL Injection attacks in websites and sub-domain links and IP
- Used Python script to automate network scanning to identify open ports and services running
- Execute daily vulnerability assessments, threat assessment, mitigation and reporting activities to safeguard information assets and ensure protection has been put in place on the systems.
- Provides assistance to system users relative to information systems security matters
- Involving in Firewall protection using IPtables in IDS(Nessus, Log server), IPS(AV server, Port Filtering)
- Involving in network issue troubleshooting and AV server update on weekly basis
- Be responsible for performing manual and automate penetration testing to communicating with findings to reporting Senior Developers to mitigate the security risk
- Follow up and ensure the closure of the raised vulnerabilities by revalidating and ensuring 100% Closure
- Processes and maintain adequate level of technical and analytical skills, to handle security incidents and threats that have the potential to introduce risk to sensitive/confidential data

Present Professional Experience

Company : Optimum Infosystems Pvt Ltd, Chennai

Period : December 2021 – February 2023

Designation : Consult - Information Security Analyst

Project Details (Dec 2021 – Feb 2023)

Project : Tanium App
Domain : Banking
Role : Vulnerability Assessment
Security Tools : Nmap, Nessus, Tanium
Team size : 6

Responsibilities:

- Operate and support Tanium Patch for enterprise patch deployment—configure patch lists, maintenance windows, and deployment targeting.
- Manage Tanium Deploy for software distribution—create software packages, define deployment configurations, and monitor rollout success.
- Use Tanium Interact for real-time endpoint querying, ad-hoc diagnostics, and targeted endpoint actions.
- Administer Tanium Inventory for software and hardware asset discovery, tracking, and reporting across managed endpoin
- Deploy and configure Tanium Server and Client across enterprise environments.
- Monitor Tanium Server health and client connectivity.
- Troubleshoot Tanium Client registration failures
- Used Python script to automate network scanning to identify open ports and services running
- Execute daily vulnerability assessments, threat assessment, mitigation and reporting activities to safeguard information assets and ensure protection has been put in place on the systems.
- Provides assistance to system users relative to information systems security matters
- Configure Tanium Connect for data export integration with SIEM, ITSM, and reporting platforms.
- Monitor module-specific dashboards and act on non-compliant or at-risk endpoint findings within defined SLA windows.
- Assist in developing Tanium Comply benchmark customizations and tailored compliance profiles under senior guidance
- Manage end-to-end Tanium Client onboarding for new endpoints, sites, and organizational units.
- Coordinate onboarding activities with infrastructure, desktop, and server teams to ensure full platform coverage.
- Validate client registration, sensor data accuracy, and module functionality for newly onboarded endpoints.
- Manage client configuration files, tanium-init.dat distribution, and client version standardization across the fleet.
- Support decommissioning and offboarding of endpoints from the Tanium platform following defined procedures.
- Track onboarding progress and report endpoint coverage metrics to senior engineers and management.
- Tanium Server, Module Server, Zone Proxy, and Client deployment and administration.
- Configuration and operations of Tanium module suites (Patch, Deploy, Interact, Inventory, Comply, Connect).
- Tanium Client deployment via GPO, SCCM, Intune, and PowerShell scripting.
- Development of Tanium sensors, packages, and saved questions.
- Vulnerability remediation and CVE understanding.
- RBAC management and Relevance language for custom sensor development.
- PowerShell and Batch scripting for Tanium automation.
- Integration of Tanium Connect with SIEM and ITSM platforms.
- Fundamental management of Windows, Linux, and macOS endpoints
- Deploy and configure Tanium Server, Tanium Module Server, Zone Proxies, and Tanium Client across enterprise environments.
- Perform vulnerability remediation using Tanium Comply, Detect, Patch, and custom remediation packages.
- Collaborate with security teams (SOC, Threat Management, GRC) to align remediation with vulnerability SLAs and compliance frameworks.
- Drive security hardening programs across endpoints using custom sensors, packages, and benchmarks.

Declaration

I hereby declare that the information furnished above is true to the best of my knowledge and belief.
