PROFESSIONAL SUMMARY

Electronics and Communication Engineering graduate (CGPA 8.5) seeking a Technical Support Associate role. Hands-on experience diagnosing and resolving Linux server, web application, and network connectivity issues on Ubuntu and AlmaLinux. Skilled at explaining technical fixes in simple terms, documenting root causes, and following structured troubleshooting steps. Patient, detail-oriented, and committed to resolving customer issues clearly and promptly.

CORE STRENGTHS

- **Troubleshooting & Root Cause Analysis:** systematic diagnosis of connectivity, permission, and service issues using logs, curl, ping, and journalctl
- **Customer Communication:** explains step-by-step resolutions in simple, non-technical language; strong written and verbal English
- **Customer-Focused Mindset:** patient, empathetic, and calm under pressure when handling issues
- **Documentation & Escalation:** follows runbooks, writes clear notes, and escalates with complete diagnostic context

TECHNICAL SKILLS

Operating Systems: Ubuntu 20.04/22.04, AlmaLinux 8/9, RHEL 8/9, CentOS

Troubleshooting & Logs: journalctl, /var/log analysis, top/htop/df/du, systemctl status, curl, ping, netstat

Networking: TCP/IP, DNS, DHCP, HTTP/HTTPS, SSH key-based auth, firewalld, iptables

Linux Administration: User/group management, chmod/chown/ACL, systemd, APT/YUM/DNF, cron jobs, LVM, process management

Web & App Servers: Apache HTTP Server (virtual hosts, .htaccess, SSL), Apache Tomcat deployment

Scripting & Automation: Bash, Python, Ansible (playbooks, inventory, modules), cron automation

Virtualisation & Cloud: Oracle VirtualBox, VMware, AWS EC2, Docker, GitHub Actions; IaaS/PaaS/SaaS fundamentals

Tools: Git, GitHub

RELEVANT PROJECTS

Multi-Tier Web Application: Linux Server Architecture | *Ubuntu, AlmaLinux, Apache, PHP, SSH, VirtualBox*

- Built a two-tier client-server setup on two Linux VMs, simulating a real production support environment
- Diagnosed and resolved connectivity and permission issues using curl, ping, and Apache error logs to identify root causes quickly
- Configured SSH key-based authentication between servers for secure, passwordless communication
- Set firewalld rules to allow required traffic and block unused ports, verifying fixes through browser and curl testing

Apache Web Server Deployment & Automation on Ubuntu | *Apache, systemctl, APT, Bash, firewalld, Ansible*

- Installed and managed Apache's full service lifecycle with systemctl for reliable uptime
- Wrote Bash scripts for health checks and log rotation, reducing manual troubleshooting effort
- Automated repeatable server setup with Ansible playbooks, cutting configuration time and errors
- Resolved deployment issues and verified secure delivery via curl and browser testing

EDUCATION

B.E. Electronics & Communication Engineering CGPA: 8.5 | 2022 – 2026
Maha Bharathi Engineering College, Tamil Nadu

CERTIFICATIONS & TRAINING

- Cloud Computing, NPTEL (IIT/NIT): cloud fundamentals, IaaS/PaaS/SaaS, virtualisation and deployment models
- Cloud Computing, Besant Technologies: 4-month hands-on training in cloud infrastructure and services
- Career Edge: Young Professionals, TCS iON: IT fundamentals and professional workplace skills
- AI & ML Internship, Corizo Edutech: practical ML concepts, model building, and data handling
