PROFESSIONAL SUMMARY

B.Tech graduate in Artificial Intelligence and Data Science, applying for Data Analyst roles. Works with SQL, Python, Excel and Power BI. Internship experience writing SQL queries for reporting, designing database tables, and building frontend and backend features in a team using Git, Jira and Confluence.

TECHNICAL SKILLS

Languages: Python, SQL
Data & BI: Power BI, Excel
Databases: MySQL, PostgreSQL
Libraries: Pandas, NumPy, Matplotlib, Seaborn
Tools: Git, GitHub, Jira, Confluence

PROFESSIONAL EXPERIENCE

HANEXIS Private Limited – AI & Software Development Intern May 2026 – July 2026

AI Lead Generation Platform

- Wrote SQL queries to filter leads, generate reports and retrieve records from the platform database.
- Designed and updated database tables used to store lead records.
- Built frontend pages for the lead dashboard and connected them to backend APIs; added authentication and role-based access.
- Fixed bugs and tested workflows before release; tracked work in Git, Jira and Confluence.

AI Voice Calling Assistant for Export Business

- Updated database tables that stored conversation history.
- Built frontend components for the admin interface and connected them to backend APIs.
- Debugged conversation flows, tested scenarios with the team and documented the results.

PROJECTS

Order Fulfilment and Delivery Performance Analysis

SQL, Python, Pandas, Matplotlib, Seaborn

- Used SQL joins and aggregations on order, customer and shipment tables to calculate delivery times and delays by region and product category.
- Cleaned and validated the data in Pandas, handling duplicates, missing values and date formats.
- Explored delivery patterns with Matplotlib and Seaborn charts and wrote a short summary of the analysis.

Customer Support Ticket Analysis

Python, Pandas, NumPy, Excel, Power BI

- Cleaned ticket data with Pandas and NumPy and calculated resolution time and open backlog by category and priority.
- Analysed ticket volume over time and by issue type.
- Built a Power BI dashboard showing ticket volume, resolution time and backlog.

RESEARCH EXPERIENCE

Antimicrobial Resistance (AMR) Prediction – Guided Research Project

Under the guidance of a researcher at NIT Kurukshetra

- Collected, curated and processed microbial genomic datasets for computational prediction of antimicrobial resistance phenotypes.
- Prepared and structured the data with reference to published machine learning-based AMR benchmarking methodology, under research guidance.

EDUCATION

Velammal Institute of Technology (Anna University), Chennai 2022 – 2026
B.Tech, Artificial Intelligence and Data Science CGPA: 8.2 / 10
