PROFESSIONAL SUMMARY

Final-year Electronics and Communication Engineering student skilled in HTML, CSS, JavaScript, and Java, with hands-on experience in AI-based and data-driven application development. Strong problem-solving and debugging skills, seeking an entry-level Software Developer role.

EDUCATION

Degree / School	Institution	Score	Year
B.E., Electronics & Communication Engineering	Nandha Engineering College	CGPA 7.1	2027
Higher Secondary Certificate (HSC)	Holy Angel Matric Hr. Sec. School	75.6%	2023

TECHNICAL SKILLS

- **Embedded & IoT Systems:** AI-enabled camera detection, seismic sensor integration, RFID-based access automation
- **Engineering Fundamentals:** Electronics & Communication Engineering coursework, systems design, sensor-based automation
- **Programming:** Java (OOP concepts), basic web scripting (HTML, CSS, JavaScript)
- **Core Strengths:** Hardware-software integration, organization, and deadline-driven project execution

PROJECTS

AI-Powered Smart Elephant Tracking System

- Designed a real-time elephant detection system by integrating AI camera hardware with the YOLO object-detection model to monitor farmland and roadway perimeters.
- Engineered the end-to-end alert mechanism linking field sensors to an SMS/app notification system for local residents and forest officials, reducing human-wildlife conflict response time.

Smart Parking System with RFID Access and Payment Integration

- Implemented RFID-based hardware access control at entry/exit gates to automatically detect vehicle tags and manage gate operation without manual intervention.
- Integrated an automated payment subsystem that calculates duration-based fees, deducts charges from a linked wallet, and issues a digital receipt.

INTERNSHIP AND EXPERIENCE

NLC INDIA LIMITED **JUNE 2025 – JULY 2025**

- Observed the operation and maintenance of industrial control systems and electrical equipment in a real-time environment.
- Strengthened practical knowledge of instrumentation, system monitoring, and industrial engineering workflows through hands-on training.

AWARDS

- Awarded Third Prize at REGENHACK VR 2.0, a 36-hour national-level hackathon organized by SRM Institute of Science and Technology, Kattankulathur, for developing an innovative technology solution.
