CAREER OBJECTIVE

Aspiring Biomedical Service Engineer with practical knowledge of medical device operation and a passion for problem-solving, seeking an opportunity to provide technical support in a healthcare or medical device environment.

Dedicated to maintaining equipment performance and minimizing downtime through effective troubleshooting and timely service.

EDUCATION

- **B.E. Biomedical Engineering** | Kongunadu College of Engineering & Technology | *2023 – 2027* | ***CGPA**: 7.4*
- **HSC (Class XII)** | Government Girls Higher Secondary School | *2022 – 2023* | ***Percentage**: 72.5%*
- **SSLC (Class X)** | Sowdambika Higher Secondary School | *2020 – 2021* | **Result:** Passed (COVID-19 assessment scheme)

TECHNICAL SKILLS

- Medical Equipment Installation and Maintenance
- Equipment Troubleshooting and Fault Diagnosis
- Preventive Maintenance and Calibration
- Basic Electronics and Electrical Safety
- Biomedical Equipment Testing and Inspection
- Technical Documentation and Service Reporting

INTERNSHIPS

Code Bind Technologies | Embedded Systems Intern

Worked on Arduino-based system development. Gained hands-on experience interfacing sensors and hardware components for real-time data monitoring, and developed and tested embedded applications for reliable performance and accuracy.

Galwin Technology | Embedded Systems Intern

Supported the design and implementation of embedded solutions. Collaborated with the team to develop and debug hardware-software integrated systems, with hands-on experience in microcontroller programming and sensor integration.

PROJECTS

Real Time Seizure Prediction and Emergency Alerting System using Arduino
Developed a real-time seizure prediction and alert system using Arduino and physiological sensors. Monitored vital parameters to detect abnormal patterns associated with seizures and sent automated emergency alerts via GSM/GPS for instant caregiver notification. Designed a cost-effective, reliable embedded solution for healthcare monitoring.

MRI Based Alzheimer's Detection using Deep Learning
Developed an MRI-based Alzheimer's detection system using convolutional neural networks (CNNs) to classify brain MRI scans for early-stage diagnosis. Preprocessed and augmented imaging data to improve accuracy and robustness, achieving reliable performance in distinguishing healthy and Alzheimer's-affected brains.

PROFESSIONAL SKILLS

- Leadership
- Communication
- Management Skills
- Critical Thinking
- Time Management
