CAREER OBJECTIVE

B.Tech graduate (Artificial Intelligence and Data Science, 2026) seeking an entry-level Data Science / Data Analytics role. Experienced in data cleaning, exploratory data analysis (EDA), predictive modeling, machine learning, and Generative AI (RAG-based systems) using Python and SQL, backed by a data science internship and a peer-reviewed publication on AI-driven analytics. Skilled at translating raw data into actionable insights through dashboards, statistical analysis, and data-driven storytelling.

EDUCATION

B.Tech – Artificial Intelligence and Data Science 2022 – 2026
MIET Engineering College | CGPA: 7.56

Higher Secondary & Secondary Schooling — 12th: 60% | 10th: 54%
Little Flower Higher Secondary School, Salem

TECHNICAL SKILLS

Programming & Web: Python, SQL

Data Science & ML: Machine Learning, Data Science, Data Analytics, Predictive Modeling, Feature Engineering

Generative AI: Generative AI (Gen AI), Retrieval-Augmented Generation (RAG), Semantic Search

Database: MySQL, SQL (Joins, Subqueries, Aggregate Functions, CRUD Operations)

Tools & Platforms: Git & GitHub, Microsoft Excel (Pivot Tables, VLOOKUP, Dashboards), Matplotlib

PUBLICATION

AI-Driven Smart City Grievance Management and Automated Complaint Escalation System
International Journal for Research in Applied Science and Engineering Technology (IJRASET) | April 2026 | Paper ID: IJRASET79419

INTERNSHIP EXPERIENCE

Data Science Intern — *DLK Technologies* 1 Month

- Performed data cleaning, preprocessing, and exploratory data analysis (EDA) on real-world datasets using Pandas, NumPy, and Matplotlib
- Built and evaluated multiple machine learning models using Scikit-learn for prediction and classification tasks
- Queried and consolidated data using SQL, then developed Excel dashboards translating raw data into clear, actionable insights for stakeholders

PROJECTS

AI-Based Complaint Management System — *Live Deployment*

- Analyzed complaint data patterns to design an automated routing logic, reducing manual triage effort using Python and MySQL
- Built data tracking and reporting features to monitor complaint resolution trends in real time
- Co-authored the system's data methodology as a peer-reviewed publication (IJRASET, April 2026)

Smart Home Energy Management System (SHEMS)

- Analyzed household energy consumption data from IoT sensors to identify usage patterns and inefficiencies
- Built automated alerting logic based on data thresholds to drive optimization and reduce energy wastage

RAG-Based Custom PDF Q&A Search Engine

Built a Retrieval-Augmented Generation (**RAG**) system from scratch using **Python** to perform semantic search on custom PDF documents. Extracted text from PDF files and applied semantic chunking techniques to preserve contextual relationships, then generated high-dimensional embeddings using **Sentence Transformers** (all-MiniLM-L6-v2) and indexed them in a **Vector Database** using **FAISS** for fast similarity search. Leveraged **PyTorch** for embedding computation and optimized chunk sizes to reduce unnecessary context retrieval, improving response accuracy by fetching only the most relevant document sections based on user queries.

CERTIFICATIONS

Google Cloud – Innovative with Google Cloud: Artificial Intelligence Badge

STRENGTHS

Analytical Thinking • Problem Solving • Attention to Detail • Quick Learner • Team Collaboration
