PROFILE SUMMARY

Apassionate and dedicated AI & ML student with a strong foundation in programming, specializing in Python and Java. Skilled in IoT development, basic frontend technologies, and UI/UX design principles, with practical experience in creating intuitive user interfaces and seamless user experiences. Experienced in integrating hardware and software to build intelligent systems and enhancing the user journey. Enthusiastic aboutthe transformative potential of artificial intelligence, machine learning, and data-driven solutions,especially in real-world applications. Strong problem-solving and logical thinking abilities, with a focus on developing innovative AI-powered solutions and designing user-centric products. Eager to continuelearning, collaborate on cutting-edge projects, and contribute to the advancement of AI and UI/UX designin technology

EDUCATION

Sep 2024-Sep2027
K S Rangasamy College of Technology, Tiruchengode - B.E ***CSE (ARTIFICIAL INTELLIGENCE AND MACHINE LEARENING)***

Sep 2021-Apr 2024
Vidhya Nikethan Intel matric Hr sec School, Rasipuram

SKILLS

Python Programming
UI/UX DESIGN
Basics of IOT
Basics of HTML, CSS, JS
Communication
Basics of DSA

PROJECTS

WildlifeDetection System (WDS) integrates radar, thermal imaging, and deep learning (CNN – TensorFlow/PyTorch) for real-time animal detection in hill stations. It measures distance and direction, enhancing wildlife monitoring and conservation. Implemented on Raspberry Pi, it ensures accurate detection in low-light and varying weather conditions. The system helps prevent human-wildlife conflicts, supports wildlife management, and provides real-time alerts for better safety and tracking.
