SARAVANAN BALAKRISHNAN

Cybersecurity Student | Aspiring VAPT & Penetration Testing Intern

+91-7817722870 | saravananbsaravananb88@gmail.com | linkedin.com/in/saravanan-b-97b638422 | Trichy, Tamil Nadu

SUMMARY

Motivated Cybersecurity undergraduate seeking a VAPT / Cyber Security Internship to apply practical knowledge of networking, Linux, web application security, and penetration testing methodology. Hands-on background in vulnerability research and reconnaissance, with a strong drive to build a career in offensive security.

TECHNICAL SKILLS

Networking & Security: Networking Fundamentals, Vulnerability Assessment & Penetration Testing, Web and Mobile Application Pentesting, Cryptography Fundamentals

Operating Systems: Kali Linux, Ubuntu

Web & Database: Basic HTML, CSS, JavaScript, MySQL

Security Knowledge: OWASP Top 10

Tools: Burp Suite, Nmap, Wireshark, SQLMap, Netcat, Metasploit, Postman, Gobuster, JADX, MobSF, Frida, ADB, APKTool, Android Studio, Emulator

HANDS-ON PRACTICE

- Practiced Web Application Penetration Testing in controlled lab environments using DVWA (Damn Vulnerable Web Application) and Web for Pentester.
- Performed vulnerability identification and exploitation exercises covering common web vulnerabilities such as SQL Injection, XSS, Command Injection, File Inclusion, and Authentication-related issues.
- Conducted network reconnaissance, port scanning, service enumeration, and vulnerability assessment on Metasploitable using tools such as Nmap, Netcat, and Metasploit.
- Used Burp Suite to intercept, analyze, and modify HTTP requests and responses during web security testing.
- Practiced automated SQL injection testing using SQLMap in authorized vulnerable lab environments.
- Performed directory and endpoint enumeration using Gobuster and analyzed network traffic using Wireshark.
- Practiced Android application security testing using MEmu Emulator with tools including JADX, MobSF, Frida, ADB, and APKTool.
- Performed Android application analysis, including APK inspection, source-code review, insecure communication checks, and runtime testing in a controlled mobile testing environment.
- Used Kali Linux as the primary penetration testing environment for reconnaissance, vulnerability assessment, and security testing exercises.

PROJECTS

Honeypot

- Developed a honeypot-based project using a decoy system designed to attract unauthorized attackers.
- Monitored connection attempts and collected source IP addresses, ports, and timestamps.
- Analyzed activities such as port scanning and unauthorized access attempts through honeypot logs.
- Used observed activity to understand attacker behavior and improve threat detection.

Attack Surface Reduction System

- Designed a security hardening lab to identify and reduce unnecessary exposed services and attack vectors on a Linux server.
- Performed network reconnaissance and port scanning using Nmap to identify exposed services.
- Hardened the server by disabling unnecessary services, securing SSH, and configuring firewall rules.
- Compared pre- and post-hardening scan results to validate the reduction in the system's attack surface.
- Used Wireshark and security logs to analyze network traffic and monitor blocked connection attempts.

EDUCATION

Bachelor of Engineering (B.E.) — Cyber Security

Sri Shanmugha College of Engineering and Technology 2023 – Present

LANGUAGES

English | Tamil

SOFT SKILLS

Problem Solving | Teamwork | Communication | Quick Learner | Time Management | Adaptability

INTERESTS

Solving Cybersecurity Labs | Continuous Skill Development
