PROFESSIONAL SUMMARY

Computer Science graduate and MCA student with hands-on experience in software development, mobile application development (Flutter), and IoT/embedded systems design. Seeking a Software Developer, Software Engineer, or related role to apply programming and problem-solving skills to building reliable, user-focused applications in a collaborative team.

TECHNICAL SKILLS

- **Programming Languages:** Python, Java, C/C++ (Arduino), Dart
- **Mobile & Web Development:** Flutter, Material 3, SharedPreferences, HTML, PHP, responsive design
- **IoT & Embedded Systems:** Arduino Uno (ATmega328P), NodeMCU (ESP8266), Blynk IoT platform, ultrasonic sensor, Arduino IDE
- **Database:** Oracle SQL
- **Version Control:** Git, GitHub
- **Soft Skills:** Problem-solving, Team collaboration, Communication, Adaptability

EDUCATION

Master of Computer Applications (MCA) — Nandha Engineering College, Erode

- Expected Graduation: 2027 • Semester II: 79%

B.Sc. Computer Science — Kongu Arts and Science College, Erode

- 2022–2025 • CGPA: 82%

Higher Secondary (12th) — Government Higher Secondary School, Seenapuram

- 2020–2022 • 68%

PROJECT EXPERIENCE

CodeCompare

Flutter, Dart, SharedPreferences, Material 3

- Developed an offline programming-learning mobile application that compares Java, C, C++, and Python through side-by-side code examples and explanations.
- Implemented 22 core programming concepts covering algorithms, data structures, OOP, recursion, sorting, searching, graphs, and more.
- Added 110+ interactive quizzes, bookmarks, recently viewed concepts, and learning-progress tracking using local storage.
- Designed a user-friendly interface with Dark/Light Mode and Presentation Mode to support interactive classroom learning.

Smart Pet Feeder — IoT-Based Automated Feeding System (B.Sc. Final-Year Project, 2024)

Arduino Uno, NodeMCU (ESP8266), Blynk, C/C++. GitHub: github.com/dhanusuram/Smart-IoT-Pet-Feeder

- Built an IoT-based automatic pet feeder using Arduino Uno and NodeMCU (ESP8266), with a servo-driven food dispenser, ultrasonic pet-detection sensor (15 cm threshold), and 16x2 I2C LCD status display.
- Developed a Blynk mobile dashboard to set 3 daily feeding windows (6 start/stop time inputs) and monitor food/pet status remotely over Wi-Fi.
- Synchronized real-time clock via NTP (IST) to drive scheduled reminders on the LCD and LEDs; linked both boards over UART serial to relay pet-detection status to the app.
- Designed the circuit and regulated 12V/5V power supply (7812/7805), and simulated the design in Proteus before hardware assembly.

PROFESSIONAL CERTIFICATIONS

- **Internet of Things** — Successfully completed NPTEL online course with 80% proficiency
- **System and Network Administration** — Technical certification focused on infrastructure management
