Professional Summary

Computer Science and Engineering student with hands-on experience in Java Full Stack development using Spring Boot, React.js, JWT Authentication, REST APIs, and SQL databases. Built enterprise-scale web applications and AI-powered solutions leveraging Spring AI, Groq LLMs, AI agents, and prompt engineering. Passionate about developing scalable AI-driven products with strong Object-Oriented Programming, Data Structures, problem-solving, and software engineering fundamentals.

Skills

Programming Languages: Java 21, Python, C, C++
Frameworks: Spring Boot, Spring AI, React.js
AI Technologies: LLMs, Groq API, LangGraph, Prompt Engineering, AI Agents
Technical Skills: Object-Oriented Programming (OOP), Data Structures & Algorithms, REST APIs, JWT Authentication, Data Analysis,
Databases: MySQL, PostgreSQL, Oracle, Supabase
Tools: Git, GitHub, Postman, Power BI, Vercel, Render, Netlify

Work Experience

Summer Intern - AI Engineer **May 2026 – Jul 2026**

EDUNET FOUNDATIONS AND IBM SKILLSBUILD COLLABORATION

- Developed and deployed an AI-powered desktop assistant using Python, Tkinter, and the Groq API to deliver specialized responses across tax, professional, coding, food, and travel use cases.
- Built a secure multi-user application with PostgreSQL-backed chat history and email verification, while designing a modular architecture for efficient scalability and maintainability.

Projects

Election Management System | *React, Spring Boot, JWT, MySQL* **Jan 2026 – Feb 2026**

- Engineered a full-stack election platform with role-based access for 5 user types (Voter, Candidate, Party, RO, Admin), implementing JWT authentication and secure voting mechanism with transaction hashing to prevent duplicate voting.
- Developed complete election lifecycle management including constituency CRUD, nomination workflow (PENDING → ACCEPTED → REJECTED), real-time vote casting, and automated result computation with rank-based sorting across 10+ interconnected database tables.
- Built responsive React frontend with 15+ dynamic components, 25+ Spring Boot REST APIs, force delete with cascade handling, search/filter functionality, and email verification service achieving 98% delivery success rate.

AI Land Document Analyzer| *Java, Spring Boot, Spring AI, PostgreSQL , Groq API, React.js* **Mar 2026 – Apr 2026**

- Engineered an enterprise land document analysis utilizing Spring Boot, Spring AI, and Groq API (Llama 3.3) to process unstructured deed PDFs into structured analytical schemas.
- Designed REST APIs connecting a React.js dashboard to execute automated property risk auditing, document indexing, and context grounded natural language document Q&A.

Tuberculosis Healthcare Analytics Dashboard | *Power BI, Data Modeling, DAX* **Apr 2026 – May 2026**

- Developed an interactive Power BI dashboard analyzing tuberculosis patient data for Naam's Hospitals to track treatment outcomes and infection trends.
- Designed custom data models and calculated measures to transform raw health records into actionable clinical insights for hospital stakeholders.

Achievements

- **Coding Challenge runner up, PSG Tech (July 2025):** Outperformed a significant field of competitors in a high-pressure coding marathon involving complex data structures and algorithmic efficiency.

Certifications

Cisco Networking Academy-Data analysis **Jan 2025**

Livewire- Spring Boot **May 2025**

Education

Bachelor of Engineering in Computer Science and Engineering **Graduating: 2027**

GCE , Salem *CGPA: 8.73 / 10*
