Objective

B.E. Agricultural Engineering graduate with experience as an IFC Block Anchor in the MKSP Government Project. Skilled in farmer coordination, field-level project implementation, agricultural extension activities, data collection, documentation, and reporting. Experienced in supporting government agricultural schemes and community-based initiatives. Seeking opportunities in agriculture sector .

Experience

IFC Block anchor
APR 2026 - Present
MKSP SCHEME

- Conducted field visits and engaged with women farmers, SHGs, FPGs, and community institutions to identify agricultural needs and challenges.
- Supported farmers in adopting improved agricultural practices, sustainable farming methods, and project interventions.
- Organized farmer meetings, awareness programmes, training sessions, and community activities to promote agricultural development initiatives.
- Managed farmer data collection, verification, documentation, reporting, and maintenance of project records.
- Coordinated with field staff, community institutions, and project teams to monitor field activities and ensure timely implementation of interventions.

Junior designer
FEB 2025 - MARCH 2026
Q2 Builders

- Prepared 2D architectural drawings and layouts using AutoCAD.
- Developed 3D models and interior concepts using SketchUp.
- Assisted in preparing floor plans, elevations, and working drawings.
- Coordinated with clients and senior designers to understand design requirements.
- Supported site measurements, material selection, and project documentation.
- Assisted in design revisions and ensured drawings met project requirements.

Education

Course / Degree	School / University	Grade / Score	Year
UG	Gnanamani college of technology	81	2024
HSC	Government girls higher secondary school	51	2020
SSLC	Government girls higher secondary school	74.2	2018

Skills

Farm machinery

Irrigation

Soil and water conservation

Intergrated farming system

AutoCAD

SketchUp

Ms office

Projects

IoT Based on algae spirulina growth monitoring system

- Developed an IoT-based system to monitor key environmental parameters affecting Spirulina growth.
- Integrated sensors to monitor temperature, pH, and other growth conditions in real time.
- Enabled data monitoring and analysis to support optimal algae growth and productivity

Design and fabrication of paddy thresher

- Designed and fabricated a paddy thresher to improve threshing efficiency and reduce manual labor.
- Selected suitable materials and components based on machine design and operational requirements.
- Tested the fabricated machine for threshing performance, efficiency, and grain separation.

Integrated farming system

- Designed an integrated farming model combining crop production, livestock, poultry, mushroom shed, Biogas plant and allied activities.
- Planned efficient utilization of farm resources, inputs, and agricultural by-products.
- Studied nutrient recycling and waste management to improve farm sustainability.
