MOHAN PRASAD N

Computer Science Engineering Student ● Aspiring Full Stack / Java Developer

Ranipet, Tamil Nadu | 7200046657 | mohanprasad05sarala@gmail.com | github.com/M0han05

PROFESSIONAL SUMMARY

Computer Science Engineering student who builds systems that solve real trust and efficiency problems in technology — from an AI model that lets hospitals collaborate on disease prediction without sharing raw patient data, to a full-stack vehicle service management platform. Strong foundation in Java, OOP, C++, and DSA, with hands-on exposure to Federated Learning, Differential Privacy, Explainable AI, Spring Boot, and PostgreSQL. Seeking a Software Engineer Internship / Java Developer / Full Stack Developer role.

EDUCATION

Bachelor of Computer Science Engineering — Government College of Engineering, Salem *Expected 2027*

CGPA: 7.85/10 | Areas of Interest: Full Stack Web Development, Data Structures and Algorithms

Higher Secondary Certificate (12th Grade) — Dr. VGN Matriculation Hr. Sec. School, Arrakonam *2023*

Percentage: 93.8%

Secondary School Leaving Certificate (10th Grade) — Dr. VGN Matriculation Hr. Sec. School, Arrakonam *2021*

Result: Passed

TECHNICAL SKILLS

Programming Languages: C, C++, Java
Core Concepts: Object-Oriented Programming (OOP), Data Structures and Algorithms (DSA)
AI / Machine Learning: Machine Learning (ML), Artificial Intelligence (AI), Generative AI (GenAI), Prompt Engineering, Federated Learning, Differential Privacy, Explainable AI (XAI)
Web Technologies: HTML, CSS, JavaScript
Frameworks: Spring Boot
Databases: PostgreSQL
Tools & Platforms: Git, GitHub, VS Code

PROJECTS

Spring Boot Library Management REST API *Java, Spring Boot, Spring Data JPA, PostgreSQL*

- Built a RESTful backend with Spring Boot exposing full CRUD endpoints for books and members, using a Controller–Service–Repository architecture.
- Modeled entities with Spring Data JPA and PostgreSQL, adding input validation and proper HTTP status codes and error responses.

AI-Based Health Risk Prediction using Federated Learning

- Built a Federated Learning pipeline letting multiple hospitals train one shared disease-prediction model without patient data ever leaving its source.
- Layered Differential Privacy into training to reduce re-identification risk while preserving model accuracy, and added Explainable AI (XAI) outputs for clinician trust.

Vehicle Management System *Java, OOP*

- Built a complete vehicle service management system in Java applying core OOP principles (encapsulation, inheritance, polymorphism) to model customers, vehicles, and service records as extensible classes.
- Implemented modules to manage customer and vehicle details, log service history, and track complete previous billing records for each customer.

INTERNSHIP

Full Stack Development Intern — Odugaa Tech *30 Days*

- Completed a 30-day full stack development internship, gaining hands-on experience across both front-end and back-end development workflows.
- Worked on building and integrating web application features, applying full stack concepts in a real, team-based development environment.

CERTIFICATIONS

- Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate — Oracle
- GEN AI Project Completion — Government College of Engineering, Salem, through DOTE (Directorate of Technical Education); certified by HCLFoundation, GUVI & HCL
- Smart India Hackathon (SIH) 2025 — Internal Hackathon Participation Certificate, Team "Code Nova", Government College of Engineering, Salem (Ministry of Education, Government of India)
- Java for Beginners — Udemy
