PROFESSIONAL SUMMARY

Computer Science Engineering undergraduate with hands-on experience in Java, Spring Boot, and REST API development, gained through a Full Stack Developer internship building backend features for a live production application. Skilled in database design with MySQL and PostgreSQL, Spring Security and JWT-based authentication, and Git version control. Solved 200+ Data Structures and Algorithms problems and built multiple backend and full-stack projects; seeking Software Development Engineer, Backend Developer, or Full Stack Developer roles.

TECHNICAL SKILLS

Programming Languages: Java, SQL, JavaScript
Frontend: HTML, CSS, JavaScript
Frameworks: Spring Boot, Spring Security, Hibernate, JPA
Backend: REST API Design & Development, Microservices Fundamentals, JWT Authentication, Backend Architecture
Databases: MySQL, PostgreSQL
Developer Tools: Git, GitHub, Maven, IntelliJ IDEA
DevOps: Docker

EXPERIENCE

Full Stack Developer Intern — Oduga Tech Pvt Ltd *June 2027 – July 2027*

- Engineered and implemented RESTful APIs using Spring Boot for a live production application, contributing to core backend feature development.
- Integrated and managed relational database operations, improving data storage efficiency and retrieval performance for application data.
- Collaborated with cross-functional development team members to test, debug, and refine backend features, improving code quality and reliability.

PROJECTS

Research Assistant API — Smart Text Processing

Java, Spring Boot, PostgreSQL, REST API

- Developed a Spring Boot REST API enabling automated research paper summarization and text analysis for structured content extraction.
- Integrated PostgreSQL for structured data storage, ensuring efficient retrieval and query performance.
- Designed a layered backend architecture (controller-service-repository) to support scalable handling of concurrent API requests.

Digital Banking Platform

Java, Spring Boot, PostgreSQL, Spring Security, JWT

- Developed a full-featured digital banking platform using Java and Spring Boot, enabling secure user registration, JWT-based authentication, and role-based access control (RBAC) for customers and administrators.
- Implemented core banking operations including account management, deposits and withdrawals, and fund transfers between beneficiaries, backed by PostgreSQL for reliable transactional data storage.
- Built RESTful APIs for transaction history, account statements, and beneficiary management, ensuring accurate financial record-keeping and improved user transparency.
- Designed an admin dashboard secured with Spring Security to monitor accounts and transactions, strengthening platform oversight and administrative control.

URL Shortener — TinyLink

Java, Spring Boot, PostgreSQL, Base62 Encoding

- Designed and developed a scalable URL shortening service using Base62 encoding for compact, collision-resistant short links.
- Implemented redirect handling and PostgreSQL-based URL mapping to support high-volume lookups.
- Built click analytics tracking and optimized backend architecture for improved performance and scalability.

EDUCATION

B.E. in Computer Science and Engineering — Government College of Engineering, Salem *2023 – 2027*

CGPA: 7.8/10

12th Standard — Periyar Matric Higher Secondary School *2022 – 2023*

94.5%

ACHIEVEMENTS

- Solved 200+ Data Structures & Algorithms problems on LeetCode and other coding platforms.
- Built 3+ backend applications using Java and Spring Boot.
- Smart India Hackathon 2025 – Internal Round Participant.
- Completed a Full Stack Developer Internship, contributing to a live production application.
