Summary

AI and Data Science undergraduate (graduating May 2027) with experience in Python, SQL, ETL, data ingestion, data transformation, and data cleaning. Built automated data workflows, processed transactional and time-series data, wrote SQL queries, and created business-ready datasets and dashboards. Skilled in database management, Flask, Django, Git, and GitHub. Seeking an entry-level Cloud Data Engineer role.

Experience

Data Analytics Intern
SAN Technovation

- Developed and maintained SQL queries for transactional data analysis, reporting, and data validation.
- Performed data cleaning, transformation, validation, and quality checks to improve the reliability of business datasets.
- Automated summary reporting workflows and built spreadsheets and progress charts to communicate key metrics and operational trends.
- Audited transactional datasets and structured data to support business reporting and data quality.

Education

Nandha Engineering College Expected May 2027
Bachelor of Technology in Artificial Intelligence and Data Science *Erode, Tamil Nadu*

Vivekananda Matriculation Higher Secondary School April 2023
Higher Secondary Certificate (12th Grade)

Projects

Sales Performance & Customer Analytics Dashboard *Python · SQL · Power BI*
Processed and cleaned **10,000+ transactional records** using Python and Pandas, handling missing values and outliers. Built SQL queries with JOINs, aggregations, and window functions to analyze revenue, sales performance, and regional trends. Developed a **multi-page Power BI dashboard** with product performance, customer segments, and revenue trends, turning raw transactional data into business-ready datasets.

E-Commerce Customer Behavior & Sales Analysis *Python · SQL · Tableau*
Queried, transformed, and analyzed customer transaction data using Python and SQL to study customer behavior, product metrics, order frequency, retention, and category-level sales. Segmented customers using **RFM analysis** (recency, frequency, monetary value). Created interactive Tableau dashboards and visualizations to communicate customer and sales insights.

IoT-Based Quality Assurance Data Pipeline *Python · ESP32 · Flask · Data Analytics*
Built a real-time data ingestion pipeline using **ESP32 sensors** to capture continuous moisture and temperature time-series telemetry. Developed collection and processing workflows in a Flask application to ingest, transform, and analyze sensor data, converting raw telemetry into structured datasets and automated quality metrics for real-time monitoring. Won **Third Prize** at a national project competition.

Digital Goods Licensing & Automated Delivery Hub *Python · Django · SQLite · HTML · CSS*
Developed a web-based digital goods platform using Python and Django to manage digital products, customer interactions, and automated delivery workflows. Built customer-facing pages and administrative interfaces to display, organize, and manage product information, with product selection and Buy Now functionality. Integrated database operations using **Django ORM** to store, retrieve, and manage product and customer-related information. Designed a modular application using Models, Views, Templates, URL routing, and database integration.

Skills

- **Programming & Data:** Python, SQL, Pandas, NumPy, Advanced Excel
- **Data Engineering:** ETL, Data Ingestion, Data Transformation, Data Cleaning
- **Databases:** MySQL, MongoDB, Relational Databases, NoSQL, SQL Queries, Database Management
- **Development:** Django, Django ORM, Flask, HTML, CSS, Git, GitHub, VS Code
- **Analytics & BI:** Power BI, Tableau, Dashboard Development, Data Visualization, Data Storytelling

Achievements & Certifications

Certifications: Python Programming (IIT Madras Research Park); SQL and Data Visualization Coursework.
Intern Prize, SNS Innovation Hub: quantum-based traffic signal optimization project built with Streamlit.
Third Prize, National Project Competition (Excel Engineering College): IoT-Based Quality Assurance System.
Third Prize, Campus Project Competition (Nandha Engineering College): Speech-to-Text Application.
300+ LeetCode problems solved across data structures and algorithms.
