RAMYA M

- **Muthulapuram, Theni**
- +918015604507 ● rm1469584@gmail.com

Objective

Motivated Electrical and Electronics Engineering graduate with knowledge of circuit analysis, electrical machines, and basic C programming. Completed internships and academic projects in IoT and embedded systems. Quick learner, eager to contribute and grow in the automation industry.

Education

GOVERNMENT COLLEGE OF ENGINEERING, SALEM |B.E. Electrical and Electronics Engineering — Salem

- CGPA:8.19[UPTO VI SEM] — Sept 2023-May 2027

ST. AGNES GIRLS HIGHER SECONDARY SCHOOL, ROYAPPANPATTI, THENI-625526|HSC — Theni, Tamil Nadu

- PERCENTAGE:87.16 — 2023

ST. AGNES GIRLS HIGHER SECONDARY SCHOOL, ROYAPPANPATTI, THENI-625526|SSLC — Theni, Tamil Nadu

- PERCENTAGE:100 — 2021

Experience

Internship trainee, NLCIndialimited, Neyveli — Neyveli

- Completed a Fourteen-day internship at NLC Limited, Neyveli, gaining in-depth, hands-on experience in thermal powerplant operations, including the functioning of boilers, turbines, alternators, Generator and cooling systems. Developed practical expertise in electrical systems, including power transformers, switchgears, protection systems, water treatment processes, and waste management practices. — Dec 2025

Internship trainee, 400 KV Substation, K.R. Thoppur, Salem — Salem

- Completed practical training in a 400 kV transmission substation. Studied substation equipment, protection systems, and power transmission operations. Gained hands-on exposure to switchyard components, SCADA systems, and maintenance procedures. — March 2025

University Projects

AUTOMATED STREET LIGHTING SYSTEM

- Designed an intelligent street lighting system using motion sensors and LDR sensors to automatically control illumination. The system switches light ON at low-light conditions and OFF during daylight, while increasing brightness when detecting pedestrians or vehicles. This smart automation enhances energy efficiency, safety, and reliability, providing a practical solution for sustainable and responsive urban street lighting.

ACCIDENT ALERT SYSTEM

- Developed an accident detection and alert system using sensors and a microcontroller to identify vehicle accidents in real time. When an accident is detected, the system automatically sends an alert message with the location details to emergency contacts, enabling a faster response. Gained experience in embedded systems, sensor interfacing, GPS/GSM communication, and real-time monitoring.

IOT-BASED WATER LEVEL MONITORING AND LEAKAGE DETECTION SYSTEM

- Developed an IoT-based system to monitor water levels and detect water leakage in real time using sensors and a microcontroller. The system sends alerts when leakage occurs or water levels change, helping to reduce water wastage and improve water management. Gained knowledge in IoT, sensor interfacing, embedded systems, and real-time monitoring.

skills

Core Subjects : Electrical machines, Power Electronics, Circuit Thery, power systems, Control system

Software Tools : MATLAB, Multisim, Fusion 360

Programming skill: C Programming

Technical skills : PCB Design, Sensor Interfacing.
