Career Objective

Final-year Electrical and Electronics Engineering student with an interest in electrical systems, circuit design, and wiring harness development. Seeking an opportunity to apply technical knowledge, enhance practical skills, and contribute effectively to engineering projects.

Education

Government College of Engineering, Erode **2022–2026**
B.E. Electrical and Electronics Engineering **CGPA: 8.4**

St. Mary's Girls Higher Secondary School, Mettur **2016–2022**
Higher Secondary Certificate (HSC) **86.3%**

Skills

Technical Skills

- Electrical Machines
- Power Electronics
- Electrical Circuit Analysis
- Power Systems

Soft Skills

- Communication
- Teamwork
- Quality Awareness
- Problem Solving
- Critical Thinking

Projects

Digital Relay Protection of Generator Transformer Using Microcontroller

- Developed a microcontroller-based protection system for generator transformers to detect overcurrent, overload, short-circuit, and over/under-voltage faults.
- Implemented automatic relay tripping to isolate faulty conditions, improving equipment protection and operational safety.
- Integrated IOT-based real-time monitoring for continuous fault status and system performance tracking.

Bluetooth Voice-Controlled LED System

- Developed a Bluetooth-based home automation system to control LED lighting using voice commands through a smartphone application.
- Interfaced an Arduino microcontroller with a Bluetooth module to receive and process voice commands.
- Implemented Embedded C programming using Arduino IDE for real-time device control.

Smart Car Parking System (IoT)

- Developed an IoT-based smart parking system to monitor and display the availability of parking slots in real time.
- Integrated sensors with a microcontroller to detect vehicle occupancy and update parking status.
- Enabled real-time data monitoring through an IoT platform to improve parking space management.

Internship

Implant Training Student 3 months
Mettur Thermal Power Station (MTPS-I)

- Observed the complete thermal power generation process from coal handling to electricity generation.
- Gained exposure to boilers, steam turbines, alternators, transformers, and switchyard equipment.
- Learned preventive maintenance practices, electrical protection systems, and industrial safety procedures.
- Understood power transmission, distribution, and control room monitoring operations.

Languages

Tamil **English**
