PROFESSIONAL SUMMARY

Motivated final-year (4th Year, 7th Semester) B.Tech (Information Technology) student (Expected Graduation: Aug 2027) and aspiring Full Stack Developer specializing in Flutter and FastAPI, with hands-on experience building web and mobile applications using HTML, CSS, JavaScript, Python, and Java. Skilled at translating real-world civic and community problems into working digital solutions, with a track record of leading teams and representing the institution in public-speaking and technical events. A fast learner who combines strong communication, leadership, and problem-solving skills to contribute effectively in an innovative tech environment.

TECHNICAL SKILLS

- **Frontend:** HTML5, CSS3, JavaScript
- **Backend:** Python, Java
- **Database:** MySQL, PostgreSQL
- **Mobile & AI:** Flutter, FastAPI, OpenAI API / LLM Integration
- **Tools & Version Control:** Git, GitHub, VS Code, Postman
- **Core Concepts:** Object-Oriented Programming (OOP), REST APIs, Full Stack Development, Database Design, JWT Authentication, Software Architecture

TECHNICAL PROJECTS

AI Campus Super App (Final Year Major Project, 2026)

Tech Stack: Flutter, Python (FastAPI), PostgreSQL/SQLite, OpenAI API/LLM, JWT, Git & GitHub, Postman

- Designed and developed an AI-powered Campus Super App that integrates multiple student services — chatbot support, attendance tracking, timetable management, assignment reminders, notes, event notifications, and faculty/department information — into a single unified platform.
- Architected the system end-to-end, designing the application workflow, database schema, and a scalable architecture to support future feature integration.
- Built a responsive Flutter frontend along with RESTful APIs in FastAPI to power core student services and the student dashboard.
- Integrated an AI chatbot using OpenAI API/LLM to provide intelligent, conversational academic support to students.
- Implemented secure JWT-based authentication and user login, and managed structured data with PostgreSQL/SQLite.
- Carried out testing, debugging, and deployment preparation using Postman for API validation.

Safe World – Civic Issue Reporting Web Application

Tech Stack: HTML, CSS, JavaScript, Python/Java, MySQL

- Designed and developed a community-driven civic-tech platform that allows citizens to report issues such as garbage, water leakage, road damage, and streetlight faults directly from a web interface, and track resolution status in real time.
- Architected the database schema and application workflow to capture report details, location, and category, and to route each report to the correct department automatically.
- Built a secure, role-based admin approval workflow that validates incoming reports before forwarding them to the relevant government department, reducing spam and duplicate entries.
- Implemented the frontend using HTML, CSS, and JavaScript for a responsive, easy-to-use citizen interface, and the backend logic in Python/Java with MySQL for persistent storage.
- Focused on usability and data integrity throughout the workflow to improve transparency and accountability between citizens and local authorities.

Digital Farm Management Portal

Tech Stack: Python/Java, MySQL, HTML/CSS

- Built a full-stack web system to digitize and centralize pig and poultry farm operations, replacing error-prone manual record-keeping with a structured digital workflow.
- Designed the MySQL database schema to manage livestock records, feed schedules, health/vaccination logs, and production data in one centralized system.
- Implemented biosecurity monitoring modules to log and track hygiene checks, entry/exit records, and health alerts, helping reduce disease-outbreak risk on the farm.
- Developed the backend application logic in Python/Java and a clean HTML/CSS interface for farm staff to record and retrieve data quickly.
- Improved operational efficiency by enabling centralized digital records that are easier to search, update, and audit compared to manual registers.

EDUCATION

B.Tech – Information Technology

JKKN College of Engineering and Technology | CGPA: 8.7 | Expected Graduation: Aug 2027

Higher Secondary Certificate (HSC) – Vocational Group: Basic Electronics Engineering

Govt. Boys Hr. Sec. School, Pethanaickenpalayam, Salem | State Board of School Examinations, Tamil Nadu | Marks: 428/600 | March 2023

Secondary School Leaving Certificate (SSLC)

Govt. Boys Hr. Sec. School, Pethanaickenpalayam, Salem | State Board of School Examinations, Tamil Nadu | 2021 (COVID-19 batch)

LEADERSHIP & EXTRACURRICULAR ACTIVITIES

- **NSS Leader:** Led a team under the National Service Scheme (NSS), organizing and coordinating community service and awareness drives, and guiding fellow volunteers.
- **Public Speaking & Elocution:** Represented the school/college in elocution and speech competitions, developing strong public-speaking and communication skills.
- **Competitive Participation:** Actively participated in various inter-school/college academic and technical competitions, demonstrating initiative and a competitive spirit.
- **Digital Brand Ambassador:** Active member of the college's digital branding team, promoting campus events and tech initiatives, and enhancing the institution's online presence.
- **Leadership & Team Management:** Took initiative in academic projects, guided peers, and effectively managed team responsibilities.

SOFT SKILLS & INTERESTS

Soft Skills: Leadership, Public Speaking, Problem Solving, Effective Communication, Teamwork
Interests: Portrait Photography, Tech Problem Solving
