SANJAY RAJ D

AI Engineer | Machine Learning Engineer | Python Developer

+91 8111010823 | sanjayraj.d007@gmail.com | linkedin.com/in/sanjayraj-ai | github.com/77sanjayraj

PROFESSIONAL SUMMARY

Final-year B.Tech student in Artificial Intelligence and Data Science with hands-on internship experience in Natural Language Processing and a proven record of building real-world AI systems spanning deep learning, computer vision, and machine learning. Skilled in Python and Java with a solid foundation in software development and problem solving. Delivered functional AI applications for deepfake detection, financial fraud detection, and spam filtering, translating theoretical models into deployable, real-time solutions. Seeking to contribute strong analytical and engineering skills to an AI Engineering, Machine Learning, or Software Development role.

EDUCATION

Kongunadu College of Engineering and technology — Trichirappalli,TamilNadu, India

Bachelor of Technology in Artificial Intelligence and Data Science — CGPA: 7.5/10 — *Aug. 2023 – Aug. 2027*

Sowdambikaa Higher Secondary School — Thuraiyur, Tamil Nadu, India

Higher Secondary Certificate (HSC) — Score: 74% — *2022 – 2023*

Swami Higher Secondary School — Keelapalur, Tamil Nadu, India

Secondary School Leaving Certificate (SSLC) — All Pass Batch (COVID-19) — *2020 – 2021*

INTERNSHIP EXPERIENCE

Natural Language Processing (NLP) Intern — june 2025 - july 2025

Sun Software Solutions | Coimbatore, Tamil Nadu

- Worked on Natural Language Processing tasks including text preprocessing, tokenization, and classification of unstructured text data as part of the AI/ML project team.
- Applied machine learning algorithms to train and evaluate text classification models, contributing to improved model accuracy on assigned datasets.
- Collaborated with fellow interns and mentors to test, debug, and refine NLP workflows, strengthening practical experience in Python-based AI development.
- Gained hands-on exposure to real-world software development practices, version control with Git and GitHub, and collaborative problem solving in a team environment.

PROJECTS

Real-Time Deepfake Detection System

Technologies: YOLO, Computer Vision, Deep Learning, Python | GitHub: github.com/77sanjayraj

- Designed and developed a real-time deepfake detection system by integrating YOLO-based object detection with deep learning models to analyze live video frame data.
- Engineered face-swap detection logic capable of flagging manipulated video content, supporting digital media authentication use cases.
- Built the pipeline to process video streams frame-by-frame, balancing detection accuracy with real-time performance constraints.

FraudGuard AI — AI-Based Financial Fraud Detection System

Technologies: Python, Machine Learning, Anomaly Detection | GitHub: github.com/77sanjayraj

- Built a machine learning-based fraud detection system applying anomaly detection techniques to identify suspicious financial transactions in real time.
- Engineered feature-driven detection logic to distinguish fraudulent transaction patterns from legitimate activity, strengthening fraud-prevention capability.
- Structured the system for continuous transaction monitoring, improving reliability of flagged alerts for financial data review.

SpamGuard AI — Spam Mail Detection System

Technologies: Python, Natural Language Processing, Machine Learning | GitHub: github.com/77sanjayraj

- Developed a spam email classification system combining Natural Language Processing techniques with machine learning algorithms.
- Trained and tuned classification models to reliably distinguish spam from legitimate email content, reducing exposure to unwanted messages.
- Implemented text-processing logic to clean and vectorize raw email data prior to model inference, improving overall classification consistency.

TECHNICAL SKILLS

Programming Languages: Python, Java, SQL

AI & Machine Learning: Machine Learning, Artificial Intelligence, Anomaly Detection, Predictive Modeling

Deep Learning & Computer Vision: Deep Learning Fundamentals, YOLO Object Detection, Computer Vision, Real-Time Video Analysis, Deepfake Detection

Natural Language Processing: Text Preprocessing, Text Classification, Spam Detection

Frameworks & Libraries: TensorFlow, PyTorch

Databases: MySQL

Developer Tools & Version Control: Git, GitHub, ChatGPT, Canva.

CERTIFICATIONS

- Japanese Language Proficiency Test (JLPT N5) — Successfully Cleared (2025)
- Python for AI & Machine Learning
- Web Development
- Front-End Development
- JavaScript

LANGUAGES

Tamil: Native Proficiency

English: Professional Working Proficiency

Japanese: JLPT N5 Certified

ACHIEVEMENTS

- Secured recognition across multiple hackathons and project expos for strong technical execution and leadership in team-based AI project delivery.

Core Competencies: Communication, Teamwork, Problem Solving, Leadership, Analytical Thinking, AI Tool Exploration (ChatGPT), Canva Design
