Generative AI

Professional Summary

Aspiring Generative AI Engineer with knowledge of AI and Machine Learning. Skilled in Python and familiar with NLP and Deep Learning concepts. Interested in working with Large Language Models and AI applications. Passionate about learning new technologies and solving real-world problems. Seeking a challenging opportunity to build a successful career in AI.

Technical Skills

Programming: Python, SQL
Generative AI: Prompt Engineering, Large Language Models (LLMs), RAG (Retrieval-Augmented Generation), Open AI API
Cloud & Tools: Git / GitHub, VS Code
Frameworks: Lang chain, Langraph, Streamlit, Fast API
Database: My SQL, OracleDB

Projects

AI Resume Analyzer

- Developed an AI-powered application to analyze resumes and compare them with job descriptions.
- Used Generative AI to identify skills, missing keywords, and improvement suggestions.
- Implemented using Python and an LLM API.
- Helps candidates optimize their resumes for specific job roles.
- AI-Based Grievance Redressed System

Document Q&A using RAG

- Developed a document-based question-answering system using RAG.
- Users can upload PDF or text documents and ask questions.
- Implemented document chunking, embeddings, and vector search.
- Used an LLM to generate accurate answers based on the uploaded content.

Education

Bachelor of Commerce in Computer Application **2023-2026**

Morappur kongu arts and Science College in Periyar University

Internship

Fintech Software Solutions **Jun 2026 - Aug 2026**

- Developed LLM-based chatbot applications integrating OpenAI APIs and prompt engineering.
- Built REST APIs using FastAPI to support chatbot functionality.
- Worked on prompt engineering to improve response accuracy.

Soft Skills

- Problem Solving
- Team Collaboration
- Communication
- Analytical Thinking

Languages

- Tamil
- English

Interests

- Artificial Intelligence
- Machine Learning
- Large Language models
