SUBHASHRI ASHOKKUMAR

9655760509 | shrisubha24@gmail.com | Salem, Tamil Nadu

OBJECTIVE

Engineering fresher (B.Tech, AI & Data Science) with a strong foundation in Python, object-oriented design, and software development concepts. Experienced building REST APIs, database-driven applications, and AI-powered tools using Python, Django, and FastAPI. Comfortable working in cross-functional teams, following SDLC practices.

SKILLS

- Programming: Python (OOP), Java, C, JavaScript, SQL, Data Structures & Algorithms
- Backend / Web: Django, FastAPI, REST API Development, HTML, CSS
- Tools & Practices: Git/GitHub, Docker, SDLC, n8n (automation), MySQL, MongoDB
- Data & AI: Pandas, NumPy, Power BI, Tableau, LangChain, Hugging Face, OpenAI/Gemini API, RAG Pipelines, Vector DBs (ChromaDB), Prompt Engineering

ACADEMIC COURSEWORK

B.Tech Curriculum — Artificial Intelligence & Data Science

- Coursework: Data Structures & Algorithms, Object-Oriented Programming, DBMS/SQL, Software Engineering, AI/ML, NLP.
- Built and deployed backend components using FastAPI, Docker, and GitHub following version-control and SDLC practices.

PROJECTS

AI-Powered Document Chatbot (Database-Driven / API Integration) | *Django, LangChain, ChromaDB, Gemini API, REST, RAG*

- Developed a Django backend integrating a REST-style API workflow with the Gemini LLM API for conversational document Q&A.
- Built a RAG pipeline: processed uploaded PDFs, generated embeddings, and stored them in ChromaDB for fast semantic retrieval.
- Applied OOP principles and modular design to structure ingestion, retrieval, and response-generation components.

Hospital Management System (Database-Driven Application) | *Java, Swing, JDBC, MySQL*

- Built a desktop application using OOP design in Java to manage patient records, appointments, and billing.
- Designed and queried a MySQL relational database via JDBC, implementing CRUD operations and validation.

Speech and Motion-Based Disease Detection System | *Python, Librosa, Machine Learning — Team Project*

- Built a system analyzing voice and movement patterns using ML to identify potential neurological disorders.
- Extracted features using Python signal-processing tools (Librosa); coordinated across modeling and evaluation in a team setting.

Consumer Sentiment Analysis (Data Processing & Analytics) | *Python, Pandas*

- Built a Python data-processing pipeline to classify customer opinions, generating insights for business reporting.

Car Data Analysis & Visualization (Reporting & Analytics) | *Power BI*

- Developed an interactive dashboard with dynamic filters and charts to analyze trends in fuel efficiency, pricing, mileage, and sales distribution.

INTERNSHIP EXPERIENCE

Data Analytics Intern | *2 Weeks — Power BI, Data Visualization, Excel*

- Built Power BI dashboards with filters and slicers to derive business insights.

Data Science Intern | *2 Weeks — Python, Scikit-learn, Pandas, NumPy, Matplotlib*

- Built and evaluated supervised ML models for predictive analytics; applied Python for data preprocessing and visualization.

EDUCATION

Muthayammal Engineering College | *2022 – 2026*

- Bachelor of Technology — Artificial Intelligence and Data Science, CGPA: 8.0

Government Model Higher Secondary School | *2020 – 2022*

- Higher Secondary Certificate — 74%

Government Model Higher Secondary School | *2019 – 2020*

- Secondary School Leaving Certificate — 75%

CERTIFICATIONS

- Java Programming Course — Stack Queue Education
- NPTEL Certification — Distributed Systems
- NPTEL Certification — Foundations of Cloud/IoT/Edge ML
- Salesforce Certified Agentforce Specialist
