## CAREER OBJECTIVE

MCA student with a B.Sc. in Software System and hands-on experience building web applications using Java, React.js, JavaScript and MongoDB. Interested in software engineering roles involving object-oriented programming, problem solving, debugging, testing and end-to-end product development. Looking to contribute to a collaborative engineering team while strengthening my skills through real-world software development.

## EDUCATION

| | |
|---|---|
| **Master of Computer Applications (MCA)** | Nandha Engineering College, Erode<br>**CGPA: 8.4** \| Currently pursuing |
| **B.Sc. – Software System / Computer Technology** | Kongu Engineering College, Perundurai<br>CGPA: 7.08 |
| **HSC** | Navarasam Matriculation Higher Secondary School, Palliyuthu \| 2022 \| 58.05% |
| **SSLC** | Navarasam Matriculation Higher Secondary School, Palliyuthu \| 2020 \| 84.08% |

## TECHNICAL SKILLS

- **Languages:** Java, Python, JavaScript
- **Programming:** Object-Oriented Programming, Problem Solving, Data Structures fundamentals
- **Web:** React.js, HTML, CSS
- **Database:** MongoDB
- **Development:** REST API integration, debugging, testing and full-stack project development
- **Tools:** Visual Studio, Android Studio, Canva

## PROJECTS

**Booking & Billing System – SPS Earthmovers** | **React.js, MongoDB**

- Developed a web-based booking and billing system to digitize day-to-day business operations.
- Worked on the frontend and database integration, with focus on a simple workflow for booking and billing activities.
- Applied structured development and debugging practices while delivering the web version of the system.

**Smart Flashcard Generator** | **React.js, Node.js, Express.js, MongoDB, Python/FastAPI**

- Built a full-stack learning application that converts study notes into flashcards and supports review and progress tracking.
- Implemented authentication, saved flashcards, review history, spaced-repetition workflow and PDF export.
- Integrated a Python NLP service with the web application through APIs, giving hands-on experience with end-to-end system integration.

**Liver Disease Prediction** | **Machine Learning, Gradient Boosting, C4.5 Decision Tree, React.js, Node.js, MongoDB**

- Developed a web-based prediction application using Gradient Boosting and C4.5 Decision Tree algorithms.
- Designed the application to accept patient/laboratory inputs and return a model-based prediction through a user-friendly interface.
- Focused on preprocessing, model integration and connecting the prediction workflow with the web application.

## CORE STRENGTHS

- Problem Solving and Analytical Thinking
- Adaptability and Quick Learning
- Self-driven development and ownership of project deliverables
- Interest in software engineering, backend systems and product development

## ACHIEVEMENTS & INVOLVEMENT

- Presented a project on converting heat energy into electrical energy at IIT Madras and secured 3rd prize.
- Attended technical symposiums on Internet of Things and Artificial Intelligence.
- Student Coordinator for placement and industrial visits.

## AREAS OF INTEREST

Web Development • Software Engineering • Artificial Intelligence • Augmented & Virtual Reality
