EDUCATION

BE ECE in Government College of Engineering, Erode 2022 – 2026
CGPA: 7.8

TECHNICAL SKILLS

- **Programming Languages:** C, Python
- **Simulation Tools:** Keil, Proteus, Multisim, LTSpice
- **Communication Protocols:** UART, I2C, SPI
- **Controller:** ESP32, ESP8266, ArduinoUno

PROJECT

Touchless Door Bell

- Developed a touchless doorbell using an ultrasonic sensor for contactless operation. Detected hand gestures within a predefined distance using ultrasonic sensing. Activated a buzzer automatically when a hand gesture was detected. Designed the system to improve hygiene by eliminating physical contact. Suitable for use in homes, offices, and public environments to enhance safety

FireFighter Rescue Robot

- An autonomous mobile robot designed for fire, smoke, gas, and temperature detection in hazardous environments. It uses ESP32-CAM for vision, sensors such as MQ-2, flame, DS18B20, and ultrasonic, and a motor driver with DC motors for navigation.

CERTIFICATIONS

- Embedded for Beginners - NIELIT
- Advanced Model Rocketry - IIST

INTERNSHIP

Techvolt Software

Worked as an Embedded Systems Intern at Techvolt Software, gaining hands-on experience in embedded system development. Learned and utilized Proteus for circuit design, simulation, and testing of embedded systems. Developed and worked on multiple small- to medium-scale embedded systems projects, strengthening practical problem-solving skills.

Pantech Solutions

Embedded Systems course at Pantech E-Learning, gaining practical knowledge in Embedded C, microcontroller programming, GPIO, timers, interrupts, and peripheral interfacing. Developed hands-on understanding of LED and switch interfacing, sensor integration, ADC, and serial communication. Learned to work with hardware registers and low-level programming for controlling real-world devices. The course strengthened my foundation in embedded hardware-software integration, debugging, and real-time system development.
