Summary

Computer Science graduate with hands-on experience in Python, Django, Django REST Framework, Flask, SQL, and REST API development. Built backend applications using PostgreSQL, SQLite, Django ORM, and SQLAlchemy, including CRUD APIs, authentication, relational data modeling, and API endpoint development. Strong foundation in Object-Oriented Programming, Data Structures and Algorithms, and backend problem solving, with 6 months of software development internship experience. Seeking Software Develpoer Engineer Positions.

Education

AVS Engineering College — Salem, Tamil Nadu
Bachelor of Engineering in Computer Science, CGPA: 8.0 — *Nov 2022 – May 2026*

Sri Gayathri Higher Secondary School — Salem, Tamil Nadu
Class XII, Percentage: 81.66 — *May 2019 – May 2021*

Technical Skills

Languages: Python, C++, C, JavaScript, SQL
Backend and APIs: Django, Django REST Framework, Flask,REST APIs, JSON
Databases and ORM: PostgreSQL, Django ORM, SQLAlchemy, SQLite,
Core Concepts: Object-Oriented Programming(OOP),Data Structures and Algorithms, Problem Solving
Frameworks and Libraries: React, OpenCV, Pandas, NumPy
Developer Tools: Git, GitHub, VS Code, Google Colab
Salesforce: Apex, Flow, SOQL, SOSL, Lightning Components

Professional Experience

Salesforce Developer Intern — Jan 2026 – Jun 2026
Genufy Techworks

- Developed business automation solutions using Apex, Salesforce Flow, SOQL, and SOSL to support CRM workflows.
- Built Apex-based workflow automation to improve internal business processes.
- Developed Lightning Components and Apex logic to support internal business processes.
- Worked with Salesforce development tools and platform features as part of a 6-month developer internship.

Projects

Project Management System – Mini Jira| GitHub — Sep 2026 – Present
Django, Django REST Framework, PostgreSQL

- Developed a RESTful project management application using Django, Django REST Framework, and PostgreSQL.
- Designed relational models for users, projects, project members, and tasks using Django ORM.
- Implemented CRUD REST APIs for task management using DRF serializers and generic class-based views.
- Implemented token-based authentication and protected API endpoints using `IsAuthenticated`.
- Used Django ORM relationship traversal and filtering to work with projects, members, users, and tasks.

Task Management Web Application |GitHub — Dec 2025
Python, Flask, SQLAlchemy, SQLite, Jinja2

- Built a CRUD-based task management web application using Flask and SQLAlchemy for backend operations.
- Implemented task creation, updating, deletion, and viewing with persistent storage using SQLite.
- Designed database models and relationships to support structured task and user data.
- Set up RESTful routing to handle navigation and data flow between frontend and backend components.
