Ms. Kavipriya K

B.E. Electronics and Communication Engineering

Objective Summary:

Motivated Electronics and Communication Engineering undergraduate with interests in Embedded Systems, IoT, and PCB Design. Skilled in ESP32 and Java fundamentals with hands-on project experience. Passionate about developing innovative engineering solutions and ready to apply technical skills in real-world projects and industry environments.

Education

B.E. Electronics and communication Engineering: 2023 - 2027

Nandha Engineering College(Autonomous), Erode

CGPA: **8.5**

HSC: 2022 - 2023

Seventh Day Adventist Matric Higher Secondary School, Neyveli

Percentage: **84.6%**

SSLC: 2019 - 2020

Seventh Day Adventist Matric Higher Secondary School, Neyveli

Percentage: **80%**

Technical Skills

- Embedded Systems and IOt (ESP32)
- PCB Design (KiCad)
- Analog & Digital Electronics
- Basic Data Structures
- Front-End Development (HTML, CSS, JavaScript)
- UI/UX Designing

Programming Languages

- Java (Intermediate)
- SQL(Beginner)

Tools & Platforms

- KiCad
- Arduino IDE
- Proteus
- Figma

Interships

Nuclear Power Corporation of India Ltd (NPCIL), Kudankulam: Jan 2026 – Jan 2026

- Completed in-plant training on “Where Atoms Meet Automation” at Kudankulam Nuclear Power Project Units 1 & 2.
- Learned basics of nuclear power generation, reactor automation systems, safety instrumentation, and plant control operations

Chip Crafts, Coimbatore: Dec 2025 – Jan 2026

- Completed training on Electronic Product Design and Development using Microcontrollers.
- Gained hands-on experience in Embedded C programming, MCU interfacing, and embedded system design tools.

IIT Madras: June 2026

- Successfully completed an 11-day (99-hour) course on Advanced Electronics Manufacturing with Power Electronics Fundamentals.
- Learned the fundamentals of power electronics, electronics manufacturing processes, PCB assembly, soldering techniques, quality control, and industrial manufacturing practices.

Projects

Onion Preservation System

- Developed a system to extend onion shelf life by monitoring temperature and humidity conditions.
- Designed to reduce post-harvest losses in agricultural storage.

WiFi-Based Attendance System

- Built an automated attendance system using WiFi network connectivity.
- Enabled automated attendance marking through WiFi connectivity.

Hairpin Bend Alerter

- Designed a road safety system to detect vehicles at blind hairpin bends using ultrasonic sensors.
- Transmitted warning signals to approaching vehicles using RF communication.

Hackathons & Technical Events

- Participated in the 24-Hour Hackathon conducted by Nandha Engineering College, focused on innovative technology and problem-solving solutions.
- Participated in the 24-Hour Hackathon organized by Malla Reddy University, working on innovative engineering and technology-based solutions.
- Secured 1st Prize in a Paper Presentation event conducted at Avinashilingam Institute for Home Science and Higher Education for Women.

Courses / Certifications

- **Ethical Hacking –** *NPTEL (Oct 2025)*
- **PCB Designing –** *Credit Course (May 2025)*
- **Raspberry Pi for Industrial Applications** – *Credit Course (Oct 2025)*
- **Cloud Computing** – *NPTEL (Oct 2024)*
- **Embedded Computer Vision Using TensorFlow Lite** - *Credit Course (April 2026)*
