About Me

I am an Electronics and Communication Engineering student with strong hands-on experience in **embedded systems, Raspberry Pi**, **Arduino**, and **sensor-based automation** Systems. Actively working on real-world problems,Skilled in **circuit design, motor control**, **analog electronics concepts**, and Python/C-based microcontroller programming. Passionate about developing smart safety systems with practical applications **Quick learner, project-oriented, and enthusiastic about innovation in embedded and automation technologies.**

Education

B.E ECE *Erode Sengunthar Engineering College* 2023 - 2027

2023 - May 2026 | GPA : 7.2

Skills

- Embedded Systems Development Microcontroller
- Programming
- Circuit Design & Prototyping
- Real-Time Hardware Debugging and Testing
- Automation & Control Systems
- Sensor Interfacing & Signal Processing
- Embedded C
- Arduino Framework
- PLC Programming

Tools

- Visual Studio
- Wokwi
- PlatformIO
- Arduino IDE
- Tinkercad

Real Time Projects

- **Smart Insulin Delivery System :**
  Designed an ESP32-based offline web dashboard to control a stepper-driven syringe actuator with calibrated dosage control and emergency safety features.
- **Emergency Alert System for Paralysis Patients :**
  Developed an ESP32 and IR eye-blink based system that triggers instant caregiver alerts via Telegram for hands-free patient communication.
- **Li-Fi Based Morse Code Communication System :**
  Implemented an Arduino-based optical receiver to decode Morse signals from light sources and display text on an LCD.
- **Automatic zone Speed Adoption System :**
  Developed a Raspberry Pi based vision system to detect speed-limit zones and automatically regulate vehicle motor speed for improved road safety in restricted areas.
- **Ambulance Detection with Automated Speed Breaker Control :**
  Created a vision-based Raspberry Pi system to detect ambulances and automatically lower speed breakers for faster emergency vehicle clearance.
- **Object Detection with Voice Output System :**
  Implemented real-time object detection on Raspberry Pi with audio feedback to assist visually impaired users.
