Projects

1. Student Leave Management System
Description: Developed a web-based system to manage student leave requests efficiently. The system allows students to apply for leave and enables admins to approve or reject requests with proper tracking and record management.
Tech Stack: HTML, CSS, JavaScript, MySQL

2. E-Commerce Website

Description: Developed a responsive e-commerce website using HTML, CSS, and JavaScript where users can browse products, view details, add items to a cart, and proceed to purchase. Implemented dynamic product listing, category-based filtering, and interactive cart functionality that allows users to manage items and view total cost before checkout. The system ensures a smooth and user-friendly shopping experience.

Tech Stack: HTML, CSS, JavaScript

3. Taxi Booking System

Description: Developed a console-based taxi booking system in Java to simulate real-world ride allocation. Implemented OOP principles (Encapsulation) to manage customer data, taxi availability, bookings, and fare calculation. The system assigns the nearest available taxi, tracks trip history, and computes driver earnings.

Tech Stack: Java
