V. SARAVANA KUMAR

Angular Senior Software Engineer | +91-7339339697 | mailtosaravanakumarv@gmail.com | linkedin.com/in/saravana-kumar-079b4b199/

Professional Summary

Angular Senior Software Engineer with 5 years of hands-on experience designing and building scalable, component-based web applications using Angular, Angular CLI, TypeScript/ES6, and RxJS/Observable patterns. Strong expertise in NgRx (Redux-pattern) state management — Store, Effects, and Selectors — for predictable, maintainable application state. Skilled in building reusable Angular components, services, directives, and modules with Angular Material, Angular Signals, and standalone components; collaborates closely with UX/UI designers to translate Figma designs into responsive, cross-browser-compatible web pages using HTML5, CSS3, SCSS/SASS, Tailwind CSS, and Bootstrap. Experienced in REST API integration, HttpClient interceptors, and following web security best practices in front-end development. Writes clean, well-documented, and testable code with unit testing in Jasmine and Karma; focused on performance optimization through lazy loading, OnPush change detection, and bundle/code splitting. Proficient with Git/version control, npm, Webpack (via Angular CLI build tooling), CI/CD pipelines, and Agile/Scrum methodology. Strong problem-solving, analytical, and communication skills.

Technical Skills

Angular & Core	Angular (v12–v19), Angular CLI, TypeScript/ES6, JavaScript, Component-based architecture, Angular components, services, directives, modules, Angular Signals, Standalone Components, Angular Material
State Management	NgRx (Store, Effects, Selectors, Entity) — Redux-pattern state management, RxJS/Observable patterns, operators, asynchronous programming, reactive design patterns
UI & Responsive Design	HTML5, CSS3, SCSS/SASS, Tailwind CSS, Bootstrap, Angular Material, Figma-to-code translation, responsive design, cross-browser compatibility
Performance Optimization	Lazy loading, OnPush change detection, bundle analysis, code splitting, tree-shaking, Webpack (Angular CLI), rendering efficiency, scalable application architecture
Testing	Unit testing (Jasmine, Karma, Jest), code coverage, maintainable and testable code
API & Security	REST API integration, HttpClient interceptors, asynchronous programming, web security best practices, secure API/token handling patterns
Tools & DevOps	Git/version control, npm, Webpack, Azure DevOps, CI/CD pipelines, Agile/Scrum methodology

Work Experience

POPULUS EMPOWERMENT NETWORK PVT LTD
Software Engineer II | Aug 2025 – Present

- Developing new user-facing features using Angular (v18/v19), Angular CLI, TypeScript/ES6, and RxJS/Observable patterns — implementing NgRx (Redux-pattern) state management with Store, Effects, and Selectors for scalable, predictable state across enterprise UI modules.
- Building reusable, component-based Angular components, services, directives, and front-end modules for future use; writing clean, maintainable, and well-documented code following Angular best practices.
- Collaborating with UX/UI designers to translate Figma designs into responsive, cross-browser-compatible web pages using HTML5, CSS3, SCSS/SASS, Tailwind CSS, and Bootstrap.
- Integrating REST APIs with HttpClient interceptors, applying web security best practices for secure data handling; working closely with backend developers to deliver seamless user experiences.
- Optimizing applications for performance and scalability through lazy loading, OnPush change detection, bundle analysis, and code splitting via Webpack/Angular CLI build tooling.
- Writing unit tests for Angular applications using Jasmine and Karma; supporting CI/CD pipeline quality gates; proficient with Git/version control and npm; participating in Agile/Scrum ceremonies.

▸ **War Room Dashboard** *Angular, RxJS, NgRx, REST API, Real-time Data*

- Developed new user-facing features — translating Figma wireframes into responsive, cross-browser-compatible web pages; implementing NgRx (Redux-pattern) state management, REST API integration, and real-time data delivery.
- Built reusable, component-based modules; wrote unit tests with Jasmine/Karma; optimized performance through lazy loading and efficient state management.

▸ **Campaign App** *Angular, RxJS, REST API*

- Translated Figma designs into responsive, cross-browser-compatible web pages; built reusable, component-based services; integrated REST APIs; wrote clean, well-documented code with unit tests and lazy loading performance optimization.

TECHTALE INNOVATIONS PRIVATE LIMITED
Software Developer (Contract) | Mar 2025 – Jul 2025

- Developed new Angular (v17+) user-facing features using TypeScript/ES6, RxJS/Observable patterns, NgRx (Store, Effects, Selectors), and Angular Material — building reusable, component-based services, directives, and modules.
- Translated Figma designs into responsive, cross-browser-compatible web pages with HTML5, SCSS/SASS, Tailwind CSS, and Bootstrap; integrated REST APIs; wrote clean, maintainable, well-documented code with Jasmine/Karma unit tests.
- Optimized for performance through lazy loading and bundle analysis; proficient with Git/version control and npm; collaborated with UX/UI designers and backend developers in Agile/Scrum.

PLANYTICS SOLUTION PVT LTD
Software Developer | Jun 2023 – Feb 2025

- Developed new Angular (v13+) user-facing features using TypeScript/ES6, RxJS, and NgRx (Store, Effects, Selectors) — implementing scalable, Redux-pattern state management and building reusable, component-based services and front-end modules.
- Translated design wireframes into responsive, cross-browser-compatible web pages using HTML5, SCSS, Tailwind CSS, and Bootstrap; integrated REST APIs; worked closely with backend developers and UX/UI designers.
- Optimized applications through lazy loading, OnPush change detection, and bundle analysis via Webpack/Angular CLI; wrote unit tests (Jasmine, Karma, Jest); maintained clean, well-documented code; proficient with Git and Agile/Scrum.

ARKIN LABS PVT LTD
Software Developer | Dec 2022 – Apr 2023

- Developed Angular user-facing features using TypeScript/ES6, RxJS/Observable patterns, and NgRx state management — building reusable, component-based services and directives with clean, maintainable, well-documented code.
- Integrated REST APIs and real-time data handling; applied lazy loading and performance optimization; wrote Jasmine/Karma unit tests; used Git/version control.

KUMARAN SYSTEMS PVT LTD
Trainee Programmer | May 2021 – Oct 2022

- Developed new Angular (v12+) user-facing features using TypeScript/ES6, RxJS/Observable patterns, and NgRx-aligned state management — building reusable, component-based services, directives, and modules with Bootstrap, HTML5, CSS3, and Angular Material.
- Translated UI designs into responsive, cross-browser-compatible web pages; integrated REST APIs; wrote clean, well-documented code with Jasmine/Karma unit tests; proficient with Git in Agile/Scrum environments.

Education

BE in Computer Science and Engineering, K.S.Rangasamy College of Technology, Tiruchengode | 2017–2021 | CGPA: 9.08/10
