Ajay Surya

Data Analyst with AI/ML Expertise — Predictive Modeling | Statistical Analysis | Business Intelligence
+91 7550089266 | ajaysurya453@gmail.com | linkedin.com/in/ajaysurya453 | github.com/AjaySurya453

Career Objective

Data Analyst with hands-on experience in Python, SQL, Power BI, Excel, and AI/ML. Skilled in data cleaning, exploratory data analysis, statistical analysis, dashboard development, data visualization, and extracting actionable business insights. Experienced in building end-to-end analytics and machine learning solutions using Pandas, NumPy, Scikit-learn, TensorFlow, and Power BI. Strong analytical, problem-solving, and communication skills with the ability to translate data into meaningful business insights.

Technical Skills

Data Analysis : Python (Pandas, NumPy), SQL, EDA, Data Cleansing, Pattern Recognition, Trend Analysis
AI/ML : TensorFlow, Deep Neural Networks, Statistical Validation, Feature Engineering, Hyperparameter Optimization, Cross-Validation
Dashboards & BI : Power BI (Power Query, DAX, KPI Cards), Interactive Dashboards, Excel (4/5)
Database : MySQL, Advanced SQL (JOINS, CTEs, Window Functions, Subqueries), Query Optimization
Tools : Git/GitHub, OpenCV, MediaPipe, Real-Time Processing

Experience

Data Analytics Intern BDreamz Global Solutions — Data Analytics
Apr 2026 - Present

- Analyzed, cleansed, and transformed datasets using SQL and Power BI; performed data quality validation and exploratory analysis
- Developed interactive Power BI dashboards using Power Query, DAX, KPI Cards; supported data-driven decision-making
- Wrote advanced SQL (JOINS, GROUP BY, CTEs, Window Functions) to extract insights and generate analytical reports

Projects

Customer Churn Prediction System(using ANN)— Predictive Modeling | *Python, TensorFlow, SQL, Power BI*

- Designed deep neural network using TensorFlow; improved accuracy from 85% to 90% via feature engineering and hyperparameter optimization
- Built end-to-end ML pipeline (data collection, preprocessing, training, validation, deployment) with statistical validation (cross-validation, accuracy, precision, recall, F1-score)
- Identified key churn drivers and high-risk segments via EDA; created Power BI dashboard for stakeholder communication

Global Ads Performance Dashboard — Analytics | *Power BI, SQL, Statistical Analysis*

- Built dashboard analyzing ad performance across 3 platforms and 5 industries; identified 2.2x ROAS advantage via statistical analysis
- Designed 3-page navigation with custom bookmarks and drillthrough; performed variance monitoring to identify performance anomalies
- Maintained 100% data accuracy and translated patterns into actionable insights for senior stakeholders via advanced visualizations

Real-Time Computer Vision System — Deep Learning | *Python, TensorFlow, OpenCV, MediaPipe*

- Developed real-time eye-controlled cursor system using deep learning facial and eye landmark tracking; enabled hands-free human-computer interaction
- Implemented sophisticated computer vision pipeline: face detection → eye landmark extraction → gaze mapping → cursor control
- Integrated blink detection and gesture-based controls for multi-modal interaction; optimized real-time frame processing for smooth responsive performance

Education

Panimalar Engineering College Chennai, TamilNadu
BE Computer Science and Engineering *2022 - 2026*
