PROFESSIONAL SUMMARY

Final-year IT undergraduate (CGPA 9.07) with a strong foundation in Data Structures & Algorithms, Object-Oriented Programming, and full-stack development, backed by hands-on experience building AI-integrated, blockchain-inspired, and IoT-based applications.

Seeking an entry-level Software Engineer role to apply strong programming, problem-solving, and system design skills to real-world engineering challenges.

TECHNICAL SKILLS

Languages: Python, Java, C
Web/Backend: React.js, Node.js, Express.js, MongoDB
Databases & Analytics: SQL, DBMS, Power BI
Core CS: Data Structures & Algorithms, OOP, Operating Systems, Software Engineering

EDUCATION

B.Tech, Information Technology — Kongunadu College of Engineering and Technology *2023 – 2027 | 9.07 CGPA*
Higher Secondary (HSC) — DAMHSS School, Srimushnam *2022 – 2023 | 88.5%*
Secondary School (SSLC) — DAMHSS School, Srimushnam *2020 – 2021 | Passed*

PROJECTS

Blockchain-Based University Election System with Biometric Authentication and AI-Driven Anomaly Detection
Backend Developer
- Designed the MongoDB schema and backend logic for a full-stack e-voting platform, applying cryptographic hashing, AI-driven anomaly detection, and biometric capture to support tamper-resistant, verified voting.

Tech Stack: React.js, Node.js, Express.js, MongoDB, JWT, bcrypt, react-webcam

Secure IoT Device Authentication and Intrusion Detection System
Front End Developer
- Built the front-end interface (HTML/CSS) to display authenticated ESP32 device data streams and flag unrecognized devices or abnormal traffic as real-time intrusion alerts.

Tech Stack: ESP32, Arduino IDE, ESP-NOW, Python, Flask, HTML, CSS

AI-Based Early Heart Disease Risk Screening Using Fingernail Images
Data Analyst
- Analyzed fingernail image data to identify early risk indicators of heart disease using AI-based screening techniques; awarded 3rd Prize for the project.

Tech Stack: Python, Image Processing, Machine Learning

INTERNSHIP

Artificial Intelligence Intern — Fantasy Solutions, Tiruchirapalli
- Completed a 15-day hands-on internship applying core AI and Python concepts through practical exercises; used AI-assisted coding tools such as GitHub Copilot and ChatGPT for prompt-driven code generation, debugging, and documentation.

CERTIFICATIONS

- Value-Added Courses: Cybersecurity, Java Programming
- Rare ML Workshop — VMKV College, Salem (imbalanced/rare-data techniques)

PUBLICATIONS

- "Blockchain-Based University Election System with Biometric Authentication," IJSRET, Vol. 11, Issue 5 (2025), DOI: 10.5281/zenodo.17283666

ACHIEVEMENTS

- 1st Prize, Intra-College Hackathon — Decentralized Medical Record Management Using Blockchain (secure, privacy-focused record sharing)
- 1st Prize, Paper Presentation — Smart Battery Monitoring System for EVs, VMKV College, Salem (current, voltage, SOH, SOC)
- 1st Prize, Paper Presentation — History of Mathematics and Its Impact on Modern Life, Muthayammal College of Engineering
- 3rd Prize, Intra-College Hackathon — AI-Based Early Heart Disease Risk Screening Using Fingernail Images
