Career Objective

Java/Spring Boot Developer with hands-on industry experience in developing and maintaining backend services and microservice-based applications. Experienced in building REST APIs, integrating Redis and RabbitMQ, working with PostgreSQL and MongoDB, and debugging production-level issues. Worked on travel-tech products including bus services, flight connector services, booking and passenger management modules. Experienced in Agile/Scrum practices, API documentation, testing, automation, and cross-functional collaboration. Currently continuing Java/Spring Boot development through freelance projects.

Technical Skills

Languages: Java, Python, C, JavaScript
Backend: Spring Boot, REST APIs, Microservices, Node.js, Express.js, Flask
Messaging & Caching: RabbitMQ, Redis
Databases: PostgreSQL, MySQL, MongoDB
DevOps & Tools: Docker, Git, Bitbucket, GitHub, Jenkins, Postman
Development Practices: Agile/Scrum, API Documentation, Debugging, Testing
Frontend: HTML, CSS, React.js, Figma/UI Wireframing

Experience

Codemagen Technologies – Software Engineer *04/2025 - 04/2026 | Bengaluru, India*

- Developed and maintained Java/Spring Boot-based backend services within a microservices architecture for travel-tech applications.
- Worked on production services including Bus Service, Akbar Service, and FareBoutique Service (flight connectors).
- Developed backend modules for booking, passenger management, admin portal, ticket generation, and related travel workflows.
- Designed and integrated RESTful APIs for communication between services and web/mobile applications.
- Integrated Redis for caching and RabbitMQ for asynchronous and reliable message delivery.
- Used Docker for application containerization and gained exposure to service deployment workflows.
- Debugged and resolved production-level issues through log analysis and troubleshooting.
- Created and maintained API documentation and collaborated with UI teams by preparing wireframes and communicating API requirements.
- Developed automation modules including Sentry–Slack integration for monitoring application failures and improving issue visibility.
- Contributed to the development of Telegram and WhatsApp booking chatbot solutions for automating booking workflows.
- Participated in Agile ceremonies, sprint planning, code reviews, and served as a Scrum Master for the team.
- Tested product modules, identified issues, and reported findings to the technical lead.

Freelance *02/2025- Present | Tiruppur, India*

- Develop backend applications and REST APIs using Java and Spring Boot based on client requirements.
- Design application components with focus on modular architecture, maintainability, and scalability.
- Gather client requirements and translate business needs into technical solutions.
- Develop, debug, test, and deploy application modules.
- Work independently on project planning, implementation, and delivery.

Winfomi - Junior Salesforce Developer Intern *09/2024- 12/2024 | Remote*

- Developed a Regression Tree model for lead recommendation and integrated it with Salesforce via a Flask REST API, validating data flow accuracy and end-to-end system reliability.
- Built and tested Apex classes, triggers, Lightning Web Components (LWC), and automation flows, performing functional and regression testing for each release.
- Collaborated with cross-functional teams to document and validate process automation workflows.
- Earned Salesforce AI SPECIALIST certification.

Research Project

Early Prediction of Ventilator-Associated Pneumonia in TBI Patients –Research Project

- Built and evaluated machine learning models (TabNet, SAINT, LightGBM) on the MIMIC clinical dataset to identify early predictive indicators of ventilator-associated pneumonia in traumatic brain injury patients.
- Performed data preprocessing and feature engineering on clinical time-series data to structure it for model training and evaluation.
- Applied statistical and analytical methods to interpret model outputs, translating findings into actionable early-warning insights for clinical use.

Achievements

- 1st Place, Thinkathon'24, Hackathon by CSE/AI Coding Club, Kongu Engineering College
- 2nd Place, Hackbuzz'24 (24-hour hackathon) by CSE Coding Club, Kongu Engineering College
- Prize Winner, KEC Hackathon 2024 (Software Edition) by KEC TBI-Coding Forum, Kongu Engineering College.

Education

Bachelor Of Engineering: Computer Science and Engineering Honours in Data Science *11/2022 - 04/2026*
Kongu Engineering College
Perundurai
CGPA: 8.21

Higher Secondary Education: Computer Science, Physics, Chemistry, Maths *08/2021 - 05/2022*
Global Matriculation Higher Secondary School
Kangayam
Percentage: 95%

Secondary School Leaving Certificate (10th grade) *04/2019 - 03/2020*
Global Matriculation Higher Secondary School
Kangayam
Percentage: 86.6%
