Versatile and passionate for driving innovation and delivering impactful solutions. Skilled in troubleshooting, maintaining and optimizing electrical systems. Committed on leveraging my technical knowledge to improve efficiency, reliability, and safety. With strong dedication to continuous learning, I am eager to contribute my abilities to an organization that values creativity, problem-solving, and the betterment of society.

EDUCATION

B.E Electrical and Electronics Engineering
College of Engineering Guindy, Anna University, Chennai
2016 - 2020 *First Class*

Class 12
India International School, Kuwait
2015 - 2016 *Secured 89%*

Class 10
India International School, Kuwait
2013 - 2014 *Secured 86%*

ACADEMIC PROJECTS

Anti Sleep Alarm
A prototype that is intended to be used in cars, buses and trucks that detects the driver's eyes and alerts if he/she is drowsing.

Water Alert Nozzle
A module that can be attached to taps which alerts if water is being wasted in case if the tap is kept open for a long period. Also it has a added feature which reduces the water that is being delivered.

Flywheel Energy Storage Device (Final Year Project)
An energy storage solution that uses less carbon footprint and high life cycle & efficiency. The Flywheel is electromagnetically beared and energy is stored and retrieved. This particular flywheel has a unique feature of clutch which in theory reduces the loss.

Hotel Management System
A program that's developed on C++ aims to make simpler a staff's interaction with the various modules of the Hotel and ease the process of acquiring information and providing services.

SKILLS & COMPETENCIES

Problem Solving | Reverse Engineering | Team Work | Verbal Communication | IT Skills | Management | Troubleshooting | Ideation & Innovation

TECHNICAL SKILLSET

- Arduino, ESP8266 microcontrollers & Raspberry Pi microprocessor
- Matlab Simulink
- Programmable Logic Controller
- Ansoft Maxwell
- LT Spice
- C/C++
- Omicron Protection relay calibration
- Siemens DIGSI & GE EnerVista Relay Configuration Softwares

CERTIFICATES & ACHIEVEMENTS

•Got awarded a cash prize of 150,000₹ for winning Start Up Pitchfest an event which was organized under the E-CELL of ANNA UNIVERSITY

•Won Robotics Mini Project event which was organized under the ROBOTICS CLUB OF CEG

•Awarded the Best Safety Observation, demonstrating a keen commitment in rectifying an issue against LOTO (Lockout/Tagout) standard requirements in EQUATE, KUWAIT

INTERESTS

Video Games | Astrophysics | Reading | Travelling | Gym

INTERNSHIP & JOB

National Industries Company (NIC), Kuwait — *Intern*

Underwent comprehensive training in PLC, electronic devices, and electrical machines, gaining valuable exposure and insights across various facets of the industry.

INTERNSHIP — *2019*

Madura Coats, Tamil Nadu — *Electrical Supervisor*

Leveraging my 8 months as an electrical supervisor, I honed my expertise in maintaining Electrical equipment. From leading teams to optimizing systems for enhanced reliability to meticulously performing maintenance activities, I ensure smooth operation and prevent costly downtime.

JOB — *2020*

Durrat Amjad General Trading Co. W.L.L. — *Materials Trading Coordinator*

Coordinating with suppliers and buyers, managing logistics for timely deliveries, and maintaining accurate transaction records.

JOB — *2021*

Equate, Kuwait — *Electrical Technician*

Working as an electrical technician under ATSCO. Jobs handled are as follows:

- Read and comprehend electrical schematics and the power distribution of plants.
- Adhering to Safety Standards within a Petrochemical Plant, ensuring the conscientious execution of tasks in a secure and safe manner.
- Knowledge in various types of Protection Relay which includes Basler, SIPROTEC, Multilin, GE & Siemens thermal overload relays.
- Engaged in two significant Turn Around events, Ethylene and EBSM, undertaking a diverse range of tasks from lower-end to higher-end skilled jobs, addressing various vendor requirements. Played a pivotal role in Turn Around preparation and provided support through to the plant's seamless startup. Ensuring thorough and accurate assessments in a team-oriented approach
- Maintenance/Repair activities
  Routine activities of various PM, RM and troubleshooting jobs in running plants and operation supports as per the operation priority. Jobs handled are as follows:

  Execution of the Preventive maintenance of various electrical machines/equipment as per procedure which includes:

  - Transformer (L.V & H.V)
    - Transformer Turn Ratio, Insulation Resistance, D.L.R.O (Digital Low Resistance Ohmmeter) & BDV test on Transformer Oil.
    - DGA test on Transformer Oil with external contractors' support.
    - Calibration of protection relays (87, 67, 27, 50 & 51) by Omicron kit
    - Calibration of CTs collaboratively with external contractors.

    - Transformer breaker's test using ODEN AT Primary Injection kit, Microversa (Secondary Injection) trip test, Breaker Analyzer & Vacuum integrity test.
  - HT & LT motors and generators
    - Calibration of protection relays in HT motors using Omicron.
    - Calibration of protection relays in LT motors using overload relay calibration kit.
    - Uploading & importing settings and data of SIPROTEC relay configuration using DIGSI.
  - Online & Offline UPS from various manufacturers (1 MW S&C Pure Wave, Solid State & Gutor). Clear understanding of UPS single line diagrams, its intricacies and operational dynamics.
  - Analyzing and interpreting Switchgear schematic designs. Also, performing Partial Discharge tests on Switchgear cubicles
  - Batteries
    - Measuring of battery's voltage & specific gravity of electrolyte.
    - Battery Impedance Test using BITE kit.
    - Load test on batteries.
  - Chargers from various manufacturers (AEG, C&D and AMETEK).
  - Carry out scheduled grounding preventive maintenance. Executed & coordinated in the installation of grounding anodes for Remote Instrument Enclosures to mitigate lightning-induced plant trip. Implemented new grounding anodes effectively, reducing impedance for enhanced system resilience.
  - Worked with Rotork & Limit Torque Motor Operated Valve (MOV).
  - Plant Fire Protection Systems & Emergency Audible Alarm System, Overseeing diverse panels from manufacturers such as Pyrotronics, Siemens, and Rhino. Also, worked on the plant emergency pull station which is communicating through the Cerberus & Hochiki panel to the emergency dispatchers.
  - Online PM of S2M magnetic bearing. Have good knowledge in this panels.
  - Conduct Tan Delta and Partial Discharge Tests on HT motors collaboratively with external contractors.
  - Maintenance of EBSM Nitrogen & Ethylene storage tank base heater & its drivers for optimal functionality.
  - Perform systematic maintenance on VFD drives, adhering to the PM schedule. Specifically carried 8 yearly preventive maintenance of ABB Direct Torque Control ACS800 speed drive without external vendor support in EU-1, which involved changing of drive capacitors, electronic cards and cooling fans. Also, Downloading & verification of settings.

- <u>Modification & Upgradation Job</u>
  - MOV controller upgradation from UEC3 to UEX in our own facilities. Which involved upgradation of MOV's electronic cards, implementation of encoders, termination of new wires, programming and checking of operation logic. Perform meticulous adjustments to limit switches, ensuring optimal functionality for open, close, and intermediate positions.
  - Collaborated with S2M magnetic bearing vendor to facilitate the panel replacement.
  - Supported the E&C team for the installation and taking in service of new DC chargers for the EU1 substation in running plant and successfully completed without any disturbance.
  - Ethylene transfer pumps motor current reading configured to the control room DCS

through GE Multilin relay.
  - Installed the digital temperature display and drive temperature alarm configured to the DCS for the DTC drive.
  - Supported the E&C team in the upgradation of EU1 generator panel.
  - Supported Al-Kulaib in the upgradation of EU1 plant fire protection panel from Pyrotronic Cerberus MXL to Siemens Cerberus XLS.
  - Implemented a safety enhancement on plant crane by integrating a proximity switch to halt the crane before reaching the mechanical stopper, mitigating potential risks.
  - Supported vendor in the 8 yearly PM of Ametek Solid State UPS. Which involved changing of electronic cards, AC & DC capacitors.

- Project
  Using robotic technology, the meticulous cleaning of furnace convection coils is seamlessly executed. Engaged in the intricate process of robot modification, we have significantly reduced the need for human intervention in the precise cleaning of furnace coils. Our team took charge of the entire design process, ensuring a seamless and successful project completion. Following the rigorous implementation, the operation team expressed complete satisfaction as the furnace not only enhanced its efficiency but also witnessed a remarkable reduction in fuel gas consumption.

JOB *2021-Present*
