CAREER OBJECTIVE

Entry-level Software Engineer with hands-on experience in Java, Spring Boot, MySQL, JDBC, and CRUD application development. Skilled in building database-driven applications and REST APIs, with experience in full-stack development and collaborative development workflows.

TECHNICAL SKILLS

Programming Languages: Java, JavaScript

Databases: MySQL, SQL

Frameworks: Spring Boot, Spring Web, Spring Data JPA, Hibernate

Tools/Technologies: GitHub, VS Code, NetBeans, Eclipse, JDBC, REST APIs, Fetch API

Core Concepts: Data Structures and Algorithms, Object-Oriented Programming (OOP), CRUD Operations

EXPERIENCE

Full Stack Developer Intern *Jul 2025 – Jan 2026*

TAP Academy *Bengaluru, India*

- Built and maintained full-stack web application modules using Java, MySQL, HTML, CSS, and JavaScript, contributing to functional, production-ready features.
- Improved reliability of database-driven components through structured debugging and testing of application functionality.
- Collaborated with a cross-functional team using Git to deliver features within real-time development workflows and sprint timelines.

PROJECTS

Online Food Delivery Application | *Java, Spring Boot, Hibernate, MySQL, JavaScript*

- Built a full-stack online food ordering platform where users can browse restaurant menus, add items to a cart, and place orders that are tracked through to delivery.
- Designed the backend with Java Spring Boot, exposing REST APIs for menu browsing, cart management, and order placement, consumed by a vanilla JavaScript frontend via the Fetch API.
- Modeled restaurants, menu items, users, and orders in a MySQL database, using Spring Data JPA and Hibernate to map Java objects to database records without writing raw SQL.
- Built a responsive frontend with HTML5, CSS3, and JavaScript that updates the cart and order status live, without reloading the page.

Library Management System | *Java, MySQL, JDBC, OOP*

- Built a desktop CRUD application that lets library staff add, search, update, and remove books, members, and borrowing records from a central database.
- Designed a normalized MySQL schema to store books, members, and loan records, and connected it to the Java application using JDBC for reliable data reads and writes.
- Applied Object-Oriented Programming principles to structure the code into reusable, maintainable classes for books, users, and transactions.
- Added login authentication and input validation to prevent unauthorized access and incorrect data entry, and built the full issue-return-track workflow for borrowed books.

EDUCATION

B.Tech, Artificial Intelligence & Data Science CGPA: 8.3 / 10

Muthayammal Engineering College, Namakkal

Higher Secondary Certificate (12th) 92.6%

Rasi Matriculation Higher Secondary School, Salem

CERTIFICATES

- Cloud Computing and Distributed Systems: Certified by NPTEL.
- Java Programming: Certified by TERV.
