Immanuvel M

Cloud & Cybersecurity Professional | SOC Analyst

immanvasi2002@gmail.com | +91-9566532651 | linkedin.com/in/godwithimman | github.com/Godwithimman

Professional Summary

AWS Certified Cloud Practitioner and SOC-trained analyst with hands-on experience in SIEM alert triage, phishing analysis, threat investigations, and incident response. Completed Amazon re/Start (16 weeks) and multiple Forage cybersecurity simulations identifying 8+ threat vectors and 3 critical attack surfaces. Skilled in TCP/IP log analysis, IAM hardening, VPC architecture, and CloudTrail monitoring. Eager to contribute to 24/7 SOC operations protecting financial services clients from emerging threats.

Technical Skills

SIEM & Detection: CloudTrail Log Analysis, CloudWatch Alarms, LetsDefend SOC Labs, Alert Triage, Phishing Analysis
Network Security: TCP/IP, DNS, Subnetting, IDS/IPS Concepts, Firewall/VPN Awareness, Network Segmentation
Cloud Security: AWS IAM (RBAC, Least-Privilege, MFA), VPC Design, Security Groups, NACLs, NAT Gateway, KMS
AWS Services: EC2, S3, CloudTrail, CloudWatch, AWS Config, SSE-S3/KMS
Security Domains: Threat Modeling, Incident Response, Phishing Triage, SOC Alert Triage, ITIL Incident Management
Tools & Platforms: Linux (Hardening), Python (Scripting), LetsDefend SOC Labs, KodeKloud

Training & Simulations

Cloud & Security Trainee Oct 2025 – Jan 2026
Amazon Web Services (AWS re/Start Program) *Salem, India*

- Completed Amazon's full-time, instructor-led 16-week AWS re/Start program covering cloud security, Linux hardening, Python scripting, TCP/IP networking, DNS, subnetting, and core AWS services.
- Provisioned and secured 10+ EC2 instances and 4 S3 buckets with IAM least-privilege controls and VPC network segmentation; configured CloudTrail and 5+ CloudWatch alarms to flag unauthorised API activity in near real-time.
- Achieved 100% module completion rate across all assessments, earning AWS re/Start Graduate credential (Credly verified).

Cybersecurity & Cloud Analyst Simulation Feb 2026
Forage — Tata & AWS Job Simulations *Remote*

- Performed phishing triage and email threat analysis, categorising samples and documenting verdicts with escalation rationale; applied SOC alert triage workflows to differentiate false positives from genuine intrusion attempts.
- Identified 8+ threat vectors and 3 critical attack surfaces in a simulated enterprise environment; produced a prioritised security-recommendation report (Tata Cybersecurity Simulation).
- Architected a 3-tier AWS solution targeting 99.9% availability while reducing estimated infrastructure cost by ∼25% through right-sizing and reserved instance planning (AWS Solutions Architecture Simulation).

Projects

AWS Cloud Security Hardening Lab Oct 2025 – Nov 2025

- Reduced lateral movement risk by ∼60% by designing a multi-tier VPC with strict public/private subnet isolation, NAT gateway, and security group segmentation across 3 network tiers.
- Cut privilege escalation exposure by ∼70% by authoring least-privilege IAM policies across 6 simulated user roles with MFA enforcement and custom password policies per AWS security best practices.
- Eliminated public data exposure across 4 S3 buckets by enabling KMS encryption, versioning, and bucket policy restrictions — achieving 100% private access compliance in the simulated environment.
- Improved threat detection coverage by ∼80% by deploying CloudTrail across all regions and configuring 5+ CloudWatch alarms to flag unauthorised API activity in near real-time.

Certifications

AWS Certified Cloud Practitioner (CLF-C02) *Jan 2026*
Amazon Web Services — Credly Verified

CompTIA Security+ Prep Training *Feb 2026*
KodeKloud: Threat Models, IAM Hardening, Cryptography | Forage

Tata Cybersecurity Analyst Job Simulation *Feb 2026*
Forage

AWS Solutions Architecture Job Simulation *2025*
Forage

Education

Bachelor of Engineering, Mechanical Engineering
AVS College of Technology
