VASANTHAN

Linux Administrator | Network Support Engineer | Aspiring Cloud / DevOps Engineer

Phone: 9940890213 | Email: vasanthloga29@gmail.com | LinkedIn: linkedin.com/in/vasanthan-l

PROFESSIONAL SUMMARY

Electronics and Communication Engineering graduate with professional experience as a Network Engineer and Linux Administrator at SmartDV. Hands-on exposure to Linux administration, networking, remote server access, IT infrastructure support, SSH, VNC, SVN, shell scripting basics, and server troubleshooting. Seeking an entry-level Cloud Support / Cloud Operations role where I can apply Linux and networking knowledge while developing practical expertise in cloud infrastructure, automation, monitoring, and DevOps.

TECHNICAL SKILLS

Cloud & Infrastructure: Cloud computing fundamentals, server infrastructure, virtualization, infrastructure troubleshooting

Operating Systems: Linux, Oracle Linux 8

Linux Administration: User and group management, file/directory management, permissions, process management, package management, basic troubleshooting

Networking: TCP/IP, OSI model, IPv4/IPv6 fundamentals, IP addressing, subnetting, DNS basics, network troubleshooting

Remote Access: SSH, VNC

Automation / Scripting: Shell scripting basics, basic infrastructure automation concepts

Version Control: SVN (Subversion)

Additional: IT infrastructure support, server monitoring fundamentals, IoT, robotics

PROFESSIONAL EXPERIENCE

SmartDV — Network Engineer & Linux Administrator

August 2026 – Present

- Support Linux server administration and network-related activities in a company IT infrastructure environment.
- Work with Oracle Linux systems and perform basic Linux administration and troubleshooting.
- Support remote server access using SSH and VNC and assist with access-related troubleshooting.
- Assist with network connectivity and server access troubleshooting.
- Work with SVN for source-code management and working-copy operations.
- Assist with IT infrastructure support, server monitoring activities, and day-to-day technical troubleshooting.
- Learn and apply infrastructure automation concepts relevant to cloud and DevOps environments.

EDUCATION

Kumaraguru College of Technology

Bachelor of Engineering (BE) — Electronics and Communication Engineering | Graduation: 2026

PROJECT

Agri Rover — Plant Disease Detection Using Machine Learning

- Developed an agricultural project integrating robotics, Linux, and machine learning concepts.
- Used Linux to prepare and train a machine learning model for plant-related image classification.
- Worked with plant image data and model training to support plant disease or health identification.
- Explored deployment of the trained model in an agricultural rover for field-level monitoring.

CERTIFICATIONS & LEARNING

- NPTEL — Introduction to IoT
- CCNA — Networking fundamentals / learning
- Ansible — Fundamentals / learning

CAREER OBJECTIVE

To build a career in Cloud Infrastructure and Cloud Operations by strengthening my Linux, networking, server administration, automation, monitoring, and cloud platform knowledge, and progressing toward a Cloud / DevOps Engineer role through continuous hands-on learning.
