github.com/lokesh89414 | Chennai, Tamil Nadu, India

SUMMARY

Final-year B.Tech student in Artificial Intelligence and Data Science with hands-on experience developing and integrating **Python-based applications, REST APIs, AI solutions, and data-driven software**. Experienced in writing reusable Python code, testing and evaluating machine learning solutions, integrating applications with production websites, and automating workflows that reduced manual audit effort by **30%**. Strong foundation in SQL, databases, software development, and problem solving.

TECHNICAL SKILLS

Programming: Python, SQL, JavaScript, MATLAB
Software Development: Application Development, REST APIs, API Integration, Testing, Automation, Debugging
Web Technologies: HTML, JavaScript, Web Applications
AI & Data: Machine Learning, Deep Learning, Generative AI, LLMs, RAG, Data Analysis
Libraries/Frameworks: Pandas, NumPy, TensorFlow, TensorFlow.js, Matplotlib, LangChain
Databases: PostgreSQL, SQL Server, NoSQL
Cloud/Tools: AWS, Microsoft Azure, GCP, Git, GitHub, Power BI, Tableau

EXPERIENCE

Centre for Development of Advanced Computing (C-DAC) **Jul 2025 – Jul 2026**
Data Science Intern *Chennai, TN*

- Developed and evaluated **machine learning and anomaly detection models in Python** using high-performance computing (HPC).
- Performed data preprocessing, feature engineering, and exploratory data analysis on structured and unstructured datasets.
- Automated compliance monitoring and anomaly-flagging workflows using Python, reducing **manual audit effort by 30%**.
- Tested and evaluated machine learning models and documented experiments, technical findings, and results.
- Prepared analytical reports and communicated technical findings to cross-functional stakeholders.

Lyre Softronic Technologies **Jun 2025 – Jul 2025**
Web Development Intern *Chennai, TN*

- Developed a **Generative AI application** using Python and LangChain and integrated it with a live web application.
- Wrote clean, reusable Python code and developed **REST APIs** to connect the AI model with the production website.
- Collaborated with the engineering team on application requirements and integration.
- Reduced support query volume by **25%** through an AI-powered self-service documentation solution.
- Improved application response efficiency by **40%** through conversational AI integration and optimization.

PROJECTS

GenAI RAG Chatbot *Python, LangChain, LLMs, REST APIs*

- Built an AI-powered chatbot using Python and LangChain, combining embedding-based retrieval with an LLM for context-aware responses.
- Integrated the chatbot through a **REST API** into a live documentation website.

Eye Disease Detection System *Python, TensorFlow.js, CNN, Deep Learning*

- Built and evaluated a CNN-based deep learning application to detect Diabetic Retinopathy, Glaucoma, and Cataracts from retinal images.
- Generated automated PDF reports to support data-driven healthcare decisions.

Ola Business Performance Dashboard *Python, Pandas, NumPy, EDA*

- Performed data preprocessing and exploratory data analysis in Python to analyze revenue trends and business performance.

EDUCATION

S.A. Engineering College, Anna University **2026**
Bachelor of Technology in Artificial Intelligence and Data Science Chennai, TN
CGPA: 8.3/10
Coursework: Data Structures & Algorithms, DBMS, Python for Data Analysis, SQL, Machine Learning

CERTIFICATIONS & ACHIEVEMENTS

Certifications: Introduction to Data Science – Cisco; Data Analysis Plan – AWS; Data Visualization – IBM; AI/ML for Geodata Analysis – ISRO
Achievements: Winner, Prompt-O-Mania, CELISTA '25 National Symposium, MSEC (Apr 2025); Finalist, HackAiThon 2025, Stella Maris College (Jan 2025)
