Summary

DevOps Engineer with 4.8 years of experience in Azure DevOps, Terraform, Docker, and Kubernetes. Successfully deployed a highly available AI orchestration platform on Azure using AKS, Azure AI Foundry, Azure Front Door, and private endpoints. Experienced in configuring highly available database clusters using Patroni, implementing multi-cloud infrastructure, and securing enterprise workloads with WAF, Bastion, and private networking. Focused on optimizing development workflows, automating infrastructure, and ensuring scalable, reliable cloud environments.

Experience

DevOps Engineer Nov 2024 – Present

Sumeru Technology Solution *Bengaluru, Karnataka*

- Created and managed compute services such as Virtual Machines (VM), Azure Virtual Desktop (AVD), App Services, and database servers for hosting and managing data.
- Managed cloud storage solutions by configuring and maintaining Azure Blob Storage for scalable and secure data storage.
- Configured Azure Container Registry (ACR) and Azure Kubernetes Service (AKS).
- Provided infrastructure support including making changes to existing infrastructure, improving security, troubleshooting issues, and writing documentation.
- Designed and implemented CI/CD processes to automate the entire build and deployment workflow.
- Administered Azure Active Directory (AD) to manage user identities, roles, and access control across cloud applications and services.
- Implemented Azure Monitoring to track the performance and health of cloud resources, and configured Virtual Networks (VNet) to ensure secure, isolated communication between services.
- Created and managed mailboxes and distribution groups for users in Office 365, ensuring proper email communication and collaboration.
- Managed user licenses in Office 365, including assigning, modifying, and revoking licenses as per user requirements and organizational policies.
- **Technology Stack:** Azure DevOps, Azure Cloud, O365, Git, Wazuh, Sophos.

DevOps Engineer Oct 2021 – Aug 2024

Yavar Tech Works *Bengaluru, Karnataka*

- Created and managed CI/CD pipelines using Azure DevOps, configuring build and release processes for various applications.
- Integrated Azure DevOps pipelines with source control repositories (e.g., Git) and package management systems (e.g., Azure Artifacts, NPM) for automated builds and artifact management.
- Configured continuous integration triggers in Azure DevOps to automatically initiate builds upon code changes.
- Implemented release pipelines in Azure DevOps, orchestrating the deployment of applications to different environments, including testing and production.
- Utilized Azure DevOps marketplace extensions and integrations to extend pipeline functionality, such as integrating with Azure services, security scanning tools, or deployment targets.
- Created and managed Jenkins jobs to orchestrate complex workflows, incorporating code compilation, unit testing, and artifact generation.
- Implemented Jenkins file-based declarative or scripted pipelines to define and version control entire CI/CD pipelines as code.
- Integrated Jenkins with source code management systems (e.g., Git) to trigger builds and deployments upon code changes.
- Designed, implemented, and managed infrastructure on multiple cloud platforms, including AWS, Azure, and Digital Ocean.
- Automated infrastructure provisioning and configuration using infrastructure-as-code tools such as Terraform and CloudFormation on both AWS and Azure.
- Worked on reducing infrastructure costs.

- Developed and maintained shell scripts for automating routine tasks such as log rotation, data backups, and server provisioning.
- Developed shell scripts to automate database backup processes for MySQL and PostgreSQL databases, ensuring regular backups and data integrity.
- **Technology Stack:** Azure DevOps, Jenkins, Azure Cloud, AWS, Docker, Git, Kubernetes, Node, Grafana, Nessus, Fortigate.

Projects

Orchestra AI Platform | *AKS, Front Door, ACR, AI Foundry, Terraform, Azure Devops* Sumeru Technology

- Architected and deployed a highly available AI orchestration platform on Azure Kubernetes Service (AKS) with multi-node pools, auto-scaling, and availability zone distribution to ensure zero-downtime workloads.
- Integrated Azure AI Foundry with OpenAI (GPT-4o), DeepSeek, MAI-DA, and MAI-Code models, exposing all model endpoints securely via Azure Private Endpoints to eliminate public internet exposure.
- Configured Azure Front Door as a global CDN and entry point with Web Application Firewall (WAF) policies to protect the platform against OWASP threats, DDoS attacks, and unauthorized access.
- Set up Azure Container Registry (ACR) with geo-replication and integrated it into the AKS cluster using managed identity for secure, keyless image pulls across all deployment pipelines.
- Deployed a Bastion VM for secure, jump-host-based administrative access to private AKS nodes and internal resources, eliminating the need for public IP exposure on any backend infrastructure.
- Provisioned Azure Blob Storage with lifecycle management policies for model artifacts, training datasets, and platform logs; enabled private endpoint access to restrict storage traffic within the VNet.
- Implemented end-to-end CI/CD pipelines in Azure DevOps for automated container image builds, vulnerability scanning via SonarQube, and rolling deployments to AKS with zero-downtime release strategies.
- Configured Azure Monitor, Container Insights, and Grafana dashboards for real-time visibility into AKS cluster health, pod resource utilization, API response times, and AI model inference latency.
- Automated all infrastructure provisioning using Terraform modules covering AKS, Front Door, ACR, VNet, private endpoints, and AI Foundry resources, enabling repeatable environment creation across dev, staging, and production.
- **Technology Stack:** AKS, Azure AI Foundry, Azure Front Door, WAF, ACR, Azure Blob Storage, Bastion VM, Private Endpoints, Terraform, Azure DevOps, Grafana, Azure Monitor.

SIPCOT | *HAProxy, DRBD, Grafana, CIS Hardening* Yavar Tech Works

- Designed and executed high-availability architecture, leveraging application-level clustering with DRBD clusters for enhanced data redundancy and reliability.
- Implemented load balancing mechanisms using HAProxy to ensure optimal distribution of traffic and improve overall system performance.
- Applied CIS hardening to enhance server security.
- Utilized Grafana to monitor application logs, virtualization data, and server metrics; set up alerts to notify the IT and development teams about issues or anomalies detected in system metrics.

Lutosa | *Patroni, NLB, ARR, PowerShell* Yavar Tech Works

- Designed and implemented a High Availability (HA) architecture for applications and databases.
- Utilized Patroni for clustering the databases, ensuring reliability and data management.
- Implemented load balancing for applications using NLB and Application Request Routing (ARR) for efficient traffic distribution.
- Automated the QA deployment process using PowerShell scripts, enhancing efficiency and reducing manual work.

ChiefNET | *Terraform, Kubernetes, Docker, Azure DevOps, Python, Grafana* Yavar Tech Works

- Utilized Terraform to automate the provisioning and configuration of cloud resources, enhancing efficiency in resource management.
- Deployed ChiefNET with seamless container orchestration using Kubernetes and enhanced deployment flexibility through efficient containerization with Docker.
- Orchestrated CI/CD pipelines in Azure DevOps for streamlined software delivery; developed Python scripts for real-time monitoring, ensuring optimal system performance.
- Utilized Grafana for comprehensive monitoring of application logs and virtualization data, leveraging InfluxDB as the backend database.

Education

Sri Shanmugha College of Engineering and Technology
B.E – Computer Science and Engineering (CGPA: 7.82) *Aug 2017 – Jun 2021*

Microsoft Certified: Azure Developer Associate (AZ-204)
Apr 2025

Microsoft Certified: Azure Administrator Associate (AZ-104)
Sep 2025

Technical Skills

CI/CD Tools: Azure DevOps, Jenkins, GitHub Actions
Cloud Platforms: AWS, Azure, GCP
Containerization: Docker, Kubernetes
Infrastructure Automation: Terraform, ARM Templates
Source Code Management: GitHub, Azure Repos, Bitbucket
Monitoring Tools: Grafana, ELK, New Relic, Prometheus, Zabbix
Security Tools: Nessus, Wazuh, SonarQube
Scripting & Programming: Python, Bash Shell, PowerShell
Databases: PostgreSQL, MySQL, MongoDB
Application/Web Servers: Nginx, Apache2, IIS, HAProxy
Business Tools: Office 365 Admin Center, Power Apps, Power Automate, Entra ID
