PROFESSIONAL SUMMARY

Computer Science Engineering graduate with practical experience in data analysis, machine learning, and predictive modeling. Built real-world projects in healthcare analytics and electric vehicle battery management using Python, SQL, and machine learning frameworks. Skilled in analyzing datasets, developing predictive models, and deploying web applications for practical, data-driven decision making across real-world business environments.

TECHNICAL SKILLS

Programming & Analysis: Python, Pandas, NumPy, SQL

Deep Learning: CNN-LSTM, LSTM, Time-Series

Web & Deployment: Stream lit

Machine Learning: Scikit-learn, Logistic Regression, Random Forest

Database: SQL Querying

EDUCATION

Bachelor of Engineering – Computer Science and Engineering 2022 – 2026

Sathyabama Institute of Science and Technology, Chennai

PROJECTS

AI-Powered Battery Analytics & Predictive Maintenance System 2024 – 2026

Python | Pandas | NumPy | Scikit-learn | CNN-LSTM | LSTM | RandomForest | Streamlit

- Built CNN-LSTM hybrid model to predict battery State of Health using time-series data and LSTM model for State of Charge estimation.
- Trained Random Forest classifier to recognize battery wear patterns and flag units needing maintenance before failure.
- Integrated all models into a Streamlit web application for real-time battery health predictions and status monitoring.

Healthcare Predictive Analytics – Caesarean Risk Assessment System | 2023 – 2024

Python | Pandas | NumPy | Scikit-learn | Logistic Regression | Streamlit | SQL

- Analyzed maternal health dataset to identify factors influencing caesarean outcomes, cleaned data, and performed feature engineering.
- Built Logistic Regression model with precision, recall, and F1-score evaluation to ensure reliable caesarean risk predictions.
- Developed Streamlit web application with SQL database for patient records and instant risk assessment.
