## Professional Summary

Versatile Mobile App Developer with a strong academic foundation (CGPA: 8.57/10, First Class with Distinction) and hands-on experience across Android, iOS, and Flutter. Natural problem-solver who thrives on understanding complex systems — from legacy enterprise codebases to modern cross-platform architectures. Known for taking full ownership, shipping production-ready features independently, and bridging the gap between technical and business requirements. Currently leading a complete Flutter rewrite of the Android app at Icomm Technologies while maintaining their decade-old Android and iOS applications used by 30K+ mobile users. Combines a full-stack skillset (Java, Spring Boot, Python, Dart) with a collaborative mindset and commitment to clean, maintainable code.

## Experience

**Mobile App Developer** Chennai, India
*Icomm Technologies — FormulaHR* *May 2026 — Present*

- Sole mobile developer owning the entire mobile stack for FormulaHR (30K+ mobile users) — maintaining decade-old Android (Java/XML) and iOS (Ionic/Angular) codebases while leading a full ground-up Flutter rewrite.
- Within the first month, navigated a complex 20k+ line legacy codebase to independently design and ship a GPS-based **Field Check-In** feature with mock-location spoofing detection — deployed to production on both Android and iOS.
- Diagnosed and resolved a long-standing geolocation bug in FormulaHR's existing check-in flow that had caused chronic location failures for years; the fix restored reliable attendance logging for field employees across the platform.
- Currently rewriting the Android app entirely in **Flutter** — designing modern UI/UX approved by stakeholders, building core application modules, and integrating REST APIs end-to-end.

**Python Programming Intern** Chennai, India
*MSME — Guindy (Government Initiative)* *Feb 2025 — Mar 2025*

- Built 3 Tkinter desktop applications applying OOP principles, completing all deliverables within a 4-week timeline.
- Developed Flask microservices with RESTful routing, gaining API integration experience directly applicable to enterprise development.
- Created data visualization dashboards using NumPy and Matplotlib for actionable business insights.

## Education

**Madha Engineering College — Anna University** Chennai, India
*B.E. Computer Science and Engineering* *Nov 2022 — May 2026*

- CGPA: 8.57 / 10 — First Class with Distinction

## Technical Skills

**Mobile:** Flutter, Dart, Kotlin, Android (Java + XML), Ionic/Angular, GPS/Location Services, Offline Storage, Cross-Platform Development

**Languages & Backend:** Java, Python, C, Spring Boot, JPA/Hibernate, Flask, REST APIs, SOAP, Microservices, Multithreading

**Databases & Tools:** MySQL, Oracle DB, Git, GitHub, Postman, Android Studio, IntelliJ IDEA, Xcode, VS Code, Linux, App Store Connect, Google Play Console

**Architecture & Patterns:** MVC, MVVM, Event-Driven, Legacy System Modernization

## Projects

**SilverScript — Edge AI Document Summarization System** 2026

- *Team Lead* — Final year project; coordinated technical decisions and guided a team of 4 from design to delivery.
- Architected an offline desktop application using Ollama (Qwen2-7B LLM) with PDF, DOCX, PPTX, and HTML support — eliminating external API dependencies for data-sensitive enterprise environments.

- Built a responsive GUI with configurable summary depth and PDF/TXT export, delivering a production-ready user workflow.
- Diagnosed and resolved memory bottlenecks in chunk-processing pipeline, improving stability on 100+ page documents by 40%.

## Certifications

**Spring Framework:** Spring 5 Basics, Spring Data JPA, Spring REST — *Infosys Springboard (2025)*

**Foundational:** Artificial Intelligence Fundamentals, Cloud Computing Fundamentals — *IBM SkillsBuild (2026)*

## Key Strengths

**Independent Ownership:** Sole mobile developer responsible for end-to-end delivery — from legacy maintenance to modern Flutter migration.

**Legacy System Expertise:** Mastered a 20k+ line codebase with SOAP integration, shipping production features within weeks of joining.

**Cross-Platform Delivery:** Shipped identical features natively on Android and iOS; currently unifying both codebases into Flutter.

**Problem-Solving:** Systematic debugging across application layers — from memory optimization to API integration challenges.

**Communication:** Translate technical concepts for stakeholders; maintain structured documentation and lead project teams effectively.
