CAREER OBJECTIVE

Financial Economics postgraduate (Madras School of Economics) with a strong foundation in statistical modelling and quantitative analytics, seeking an Analyst role in Market Mix Modeling (MMM). Skilled in Python, SQL, R and Power BI, with hands-on experience building predictive models, validating data and translating complex datasets into clear, decision-ready insights. Brings applied experience analysing market and financial data trends, collaborating with stakeholders, and building dashboards for performance tracking,eager to apply this analytical rigor to optimizing marketing investment and driving measurable ROI.

EDUCATION

- MA Financial Economics, Madras School of Economics *2023-2025*
- BA Economics, Central University of Tamil Nadu *2020-2023*

SKILLS

Data & Technical Tools: Python (pandas, NumPy, scikit-learn) | SQL | Power BI | Advanced Excel | ETL Pipelines | Data Visualisation | R | VBA
Analytics & Modelling: Regression Analysis | Classification Models | Time Series Forecasting (ARIMA) | Feature Engineering | Model Validation | Predictive Analytics | AUC-ROC | Precision-Recall
Business & Reporting: Marketing & Financial Performance Analysis | Trend Identification | Dashboard Development | Decision Support Analytics | Stakeholder Reporting & Communication | Compliance & Risk Reporting

EXPERIENCE

Junior Associate- Global Markets – Aionion Capital *July 2025 – Sep 2025 | Chennai, India*

- Analysed market and performance data across Indian and US equity markets for tracking price movements, sectoral trends, and macroeconomic indicators to generate data-driven commentary that supported strategic investment decisions.
- Partnered with senior stakeholders to support portfolio management for HNI clients, monitoring performance and translating market developments into clear, structured summaries for decision-making.
- Applied quantitative and descriptive analysis techniques to financial datasets to surface actionable insights and performance trends aligned with client objectives.

Student Intern – Invent Solutions Pvt. Ltd *Jun 2022 – July 2022 | Chennai, India*

- Conducted quantitative analysis on client financial datasets using Advanced Excel and Tally, identifying reporting discrepancies and summarising performance trends for management review.
- Built structured data validation workflows that improved reporting accuracy and reduced manual reconciliation effort across monthly reporting cycles.
- Collaborated with senior analysts to convert raw data into decision-ready outputs, aligning outputs with stakeholder requirements.
- Documented process flows and data-handling procedures to improve consistency and support audit readiness.

PROJECTS

1. ***Regression-Based Credit Risk Modelling – American Express Codelab***
   - Built a multivariate logistic regression model in Python to quantify how individual financial and behavioural variables drove default probability, using feature engineering to isolate each variable's contribution on an imbalanced dataset.
   - Validated model robustness through cross-validation and statistical performance metrics (AUC-ROC, precision-recall) then translated coefficient-level results into business-interpretable driver insights.
     A modelling approach directly analogous to isolating individual marketing-channel contributions in MMM.
2. ***Data Consolidation & Driver Analysis – Mortgage Loan Compliance Dashboard***
   - Built a SQL-based ETL pipeline to consolidate data from multiple processing stages into a single unified analytical dataset, comparable to integrating spend, sales, and channel data from multiple sources.
   - Applied trend and correlation analysis across 5+ KPIs in Power BI to identify the key variables driving processing bottlenecks, translating statistical findings into data-backed recommendations for optimization.
3. ***Scenario-Based Quantitative Risk Modelling – Enterprise Risk Management***
   - Built a VBA-automated Excel risk dashboard to assess enterprise level credit, operational and market risk exposures using a probability-impact matrix and scenario analysis, dynamically populating exposure rankings and mitigation controls across risk categories.
   - Developed a VBA-driven tiered reporting output covering top-5 risk positions with mitigation strategies, automating data transformation from raw risk inputs into structured compliance-ready summaries for regulated market reporting.
