- **Tools Used:** Python, OpenCV, Dlib, Haar Cascade, NumPy
- Developed a secure face recognition-based login system that authenticates users by detecting and verifying live human faces. Integrated robust anti-spoofing techniques such as eye blink detection and liveness verification to prevent photo or video-based attacks. The system captures real-time facial features, matches them against a trained database, and allows access only to authorized users. Designed with a user-friendly interface.
- The system captures live video input, recognizes known faces from a pre-registered dataset, and marks attendance with timestamps into a secure local database.
