Data Analyst

Analytical and detail-oriented professional with a robust foundation in data architecture and statistical modeling. Expert in transforming raw datasets into actionable insights using MySQL and Power BI. Highly proficient in Python-based data manipulation (Pandas,Numpy) and building predictive frameworks through Machine Learning. Proven ability to bridge the gap between complex technical analysis and strategic business decision-making.

Skills

- My Sql
- Power Bi
- Tableau
- Excel
- Python (Pandas , NumPy)
- Machine Learning(Supervised & Unsupervised)
- Deep Learning (Neural Networks ,Keras)

Certificates

- Getting Started with Databases
- Intro to Gen AI
- Machine Learning

PROJECTS

CAR SALES REPROT AND INSIGHTS
Excel

Utilized Power Query for data cleaning and Pivot Tables to aggregate sales metrics across multiple dimensions like geography and demographics.
Implemented dynamic Slicers and Timeline filters linked to interactive charts to create a responsive, user-driven data visualization interface.

DIABETIC - PREDICTION
Machine Learning

Python and Scikit-Learn to clean data and train a machine learning model to categorize inputs into two groups
It then generated this classification report to measure the model's accuracy and its ability to distinguish between those two groups.

TIME SERIES FORCASTING
Deep learning

Developed a production-grade multivariate forecasting system using LSTMs/Transformers for non-stationary data, optimized via Bayesian search. Integrated SHAP/Integrated Gradients to provide model interpretability and feature importance for long-term (30-step) predictions.
