JOYCE A.S.J.

Salem, India | +91 63809 57931 | joyceasj08@gmail.com | linkedin.com/in/joyce-a-s-j-3284b8278

PROFESSIONAL SUMMARY

Motivated Computer Science Engineering student (CGPA 8.04) with hands-on experience in Java, SQL, and front-end technologies. Demonstrated ability to build real-world applications, including a database-driven employee management system and a web-based canteen food ordering system. Eager to contribute to software development teams through strong problem-solving skills and a passion for learning.

EDUCATION

B.E. – Computer Science and Engineering: 2022 – 2026
AVS College of Technology, Salem | CGPA: 8.04

Grade 12 – Higher Secondary (Science): 2021 – 2022
Vivekananda Matric Higher Secondary School, Salem | 77%

Grade 10 – SSLC: 2019 – 2020
Vivekananda Matric Higher Secondary School, Salem | 86%

TECHNICAL SKILLS

Programming Languages: Java (Strong in Operators, Tokens, Methods; Proficient in Conditional Statements, Arrays, Loops, and OOP Concepts), C, C++

Java 8: Lambda Expressions, Functional Interfaces, Stream API

Advanced Java: JDBC, Hibernate ORM (Session Factory, HQL, Entity Mapping, CRUD Operations), JSP, Servlet, Spring Framework, Spring Boot, Postman Tool

Database: SQL (Advanced queries, Joins, Subqueries, DDL/DML/TCL, Normalization, Database Design)

Front-End Development: HTML5, CSS3 (Flexbox, Grid, Responsive Design, Animations), JavaScript (DOM, Events, Async/Await, REST APIs, JSON), React JS

Concepts: Data Structures & Algorithms, Object-Oriented Programming, Speech Recognition

PROJECTS

Canteen Food Ordering System

- Developed a web-based Canteen Food Ordering System using Java Servlets, JDBC, HTML, CSS, and MySQL.
- Implemented user registration, login, food management, cart, multiple-item ordering, and order history features.
- Designed admin and user modules with database-driven food and order management functionality.

Employee Management System | *Academic Project*

- Developed a Java-based Employee Management System to manage employee records, departments, and job details through a structured, database-backed application.
- Used Hibernate ORM to map Java objects to database tables, simplifying CRUD operations and eliminating repetitive JDBC boilerplate code.
- Designed entity relationships and HQL queries to handle employee registration, record updates, and data retrieval efficiently.
- Technologies used: Java, Hibernate, SQL, JDBC

CERTIFICATIONS & TRAINING

- Core Java – Online Certification Course, Besant Technologies
- Data Structures and Algorithms – Internship, Finest Coder
- UI/UX Design – Certification, Novitech
- Foundation Skill Training Programme – AVS College of Technology in association with LABIT (November 2023)
