OBJECTIVE

Mechanical Engineering student with hands-on experience in automotive design, CAD modelling, prototype development, manufacturing, and vehicle testing through SAE BAJA, Go-Kart, and EV competition projects. Skilled in Siemens NX, Creo, fabrication, and design validation, seeking an R&D, Design, or Manufacturing Engineer role to contribute to innovative product development.

EDUCATION

B.E. Mechanical Engineering - Knowledge Institute of Technology (KIOT), Salem — CGPA: 7.8 (Up to 6 Sem) 2023 – Present
Government Higher Secondary School – 12th: 54.6% — 2022 – 2023
S.P.M. Higher Secondary School – 10th: All Pass — 2020 – 2021

TECHNICAL SKILLS

- CAD Software: Siemens NX | AutoCAD | Creo
- Design: Engineering Drawings | Bill of Material BOM | Reverse Engineering
- Programming: Python
- Testing: Vehicle Testing | Design Validation | Root Cause Analysis
- Manufacturing: Prototype Fabrication | Mechanical Assembly | Manufacturing Planning | ARC Welding

AREAS OF INTEREST

- Product Development
- Product Benchmarking
- Engineering Design

EXPERIENCE

SAE BAJA 26 - Manufacturing Head & Driver

- Supervised manufacturing, fabrication, and final assembly of the BAJA SAE prototype while ensuring quality standards and project deadlines.
- Performed off-road vehicle testing to evaluate handling, suspension performance, braking efficiency, and overall vehicle reliability.

Go-Kart - Team Captain

- Managed the design, fabrication, assembly, and validation of a national-level Go-Kart, leading a multidisciplinary student team.

SAE Electric Four-Wheeler Design Challenge

- Coordinated component integration, manufacturing activities, and quality checks, contributing to the team's Overall 3rd Place finish.

SAEISS ADMMS International Conference - Overall Coordinator

- Managed the overall technical sessions, event operations, and team activities, ensuring seamless conference execution.
- Managed session scheduling, time management, and participant coordination, maintaining efficient event flow and operational excellence.

PROJECTS

Passive Cooling System

- Designed and developed a passive cooling system by conducting material selection, thermal analysis, and feasibility studies to reduce energy consumption without active power input.

Smart Energy Consumption Monitoring System

- Designed and implemented an Arduino and IoT-based smart energy monitoring system capable of real-time electricity usage tracking, cloud visualization, and consumption analytics.
- Analysed historical and live energy consumption data to estimate electricity costs and recommend energy-saving opportunities.

Plant cutter Machine

- Captained the design and development of a Plant cutter machine, overseeing fabrication, material selection, and prototype assembly.

Ai – Based Hospital Asset Tracking and Smart Patient Flow Management System

- Developed an AI-powered hospital asset tracking and patient flow management system using Python, Pandas, Scikit-learn, and Streamlit to predict patient waiting times and optimize hospital resource utilization.

Urban Traffic-Aware Delivery Route Optimization Model

- Developed a system to predict delivery travel time using traffic, weather, distance, and road conditions.
- Used Dijkstra's algorithm to find optimized routes and displayed routes using a Stream lit dashboard.

ACHIVEMENTS

- Auto Sports Go-Kart – Best Innovation Award, Overall Static Winner & Endurance Runner-Up certificate.
- AIMS Go-Kart Championship – Vehicle Inspection Clearance, Best Timekeeper & Social Media Award certificate.
- SAE BAJA 2026 - Overall Championship with cash price 1.4L
- Electric Four-Wheeler Design Challenge – Overall 3rd Place
- HIMS Go-Kart – Endurance winner
- ADAMS International Conference – Volunteer Certificate.
